#### **MAIN TRENDS**

#### THE CURRENT ACCOUNT AND CAPITAL ACCOUNT

The current account deficit was CZK 88.9 billion, due to the income deficit, which exceeded the trade and services surplus.

The year-on-year decline in the current account deficit to 2.5% of GDP in 2007 reflected an improvement in the output surplus (the balance of goods and services) to 4.9% of GDP. Higher returns on direct investment for foreign owners and a growing deficit of private transfers abroad acted in the opposite direction.

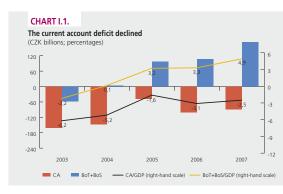

The goods trade surplus in 2007 resulted from growth in external demand, in particular in neighbouring EU Member States; from an expansion in export-oriented production capacity driven by inflows of foreign direct investment into the Czech Republic; and from an improvement in the terms of trade. An increased trade surplus vis-à-vis the EU Member States dominated over adverse trade developments with China, Japan and certain other South-East Asian countries. The trade deficit with the Russian Federation declined due to increased exports and a fall in domestic demand for imports of energy-producing commodities.

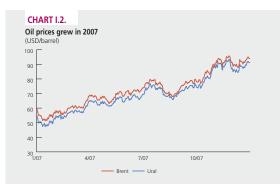

The terms of trade improved by 2.3 percentage points in 2007, with export prices rising by 1.3% and import prices falling by 1%. Machinery production, amid declining export and import prices, recorded positive terms of trade (index 103). Price developments on external markets and their effects on local manufacturers and importers were considerably eased by the koruna's exchange rate trend. The improvement in the terms of trade was achieved in spite of sharp growth in energy-producing commodity prices in the world market. The dollar price of oil almost doubled.

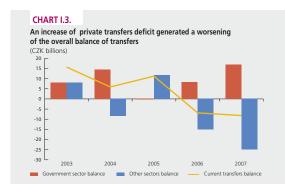

The rise in the services surplus reflected increased external demand for transport and other services supplied by Czech businesses. Within transport services there was a notable improvement in exports of road and air transport services. In the case of other services, increased exports were recorded across a wider range of services, but the Czech Republic still remains a net importer. A year-on-year decline in net receipts from foreign tourism was due to lower growth in external demand for trips to the Czech Republic as compared to the growth in outgoing travel and expenditure abroad.

The year-on-year rise in the income deficit was due mainly to growing returns on foreign direct investment in the Czech Republic, related to investors' performance. One positive feature was the preferential use of a proportion of profits by foreign shareholders for reinvesting in their businesses over the payment of dividends abroad. The debit side of the income balance was burdened by the increasing costs of employing foreign workers in the Czech Republic.

The slight increase in the current transfers deficit was due to a less favourable balance of private transfers by businesses and households abroad (remittances, gifts, taxes and fees). Higher collection of taxes and social security contributions from foreign workers employed in the Czech Republic, as well as an improved balance of income and payments in relation to the EU budget recorded in the balance of transfers, had a positive impact on net government sector transfers.

The capital account recorded an increased surplus, due to growth in receipts from EU structural funds recorded on the capital account and a surplus on trade in emissions permits.

#### THE FINANCIAL ACCOUNT

The financial account recorded a surplus of CZK 104.5 billion.

The corporate sector used foreign funds to the same extent in 2007 as in 2006. The majority consisted of FDI inflows, primarily in the form of growth in the share of foreign companies in reinvested earnings and, to a lesser extent, increases in the equity capital of subsidiaries. On the other hand, domestic companies' demand for foreign financial loans and foreign investors' interest in purchasing Czech stocks and bonds declined. Asset-side transactions consisted mainly of domestic companies' investments in foreign securities. The balance of asset-side transactions deteriorated compared to the previous year, owing to a decline in direct investments by domestic companies abroad and to a fall in residents' funds on foreign accounts.

The government sector recorded increased drawings of foreign funds, due to foreign investors' demand for government bonds. Drawdown of EIB loans for infrastructure development and regional projects declined compared to the previous year.

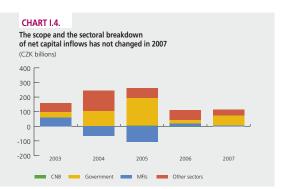

Monetary financial institutions recorded a significant increase in asset-side and liability-side transactions. The asset-side transactions were linked with the placing of deposits and the provision of financial loans abroad. These transactions were partly covered by drawings of short-term funds on the liability side. Transactions in securities were of secondary importance.

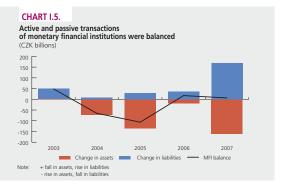

#### **INTERNATIONAL RESERVES**

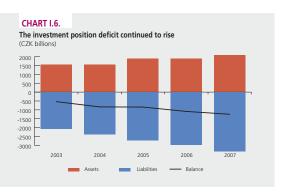

CNB international reserves, adjusted for valuation changes, rose as a result of investment income on the reserves, sales of part of this income on the market, and transactions executed for CNB customers.

#### THE INTERNATIONAL INVESTMENT POSITION AND EXTERNAL DEBT

In 2007, the Czech Republic's international investment position deficit mainly reflected continued inflows of FDI into the Czech Republic. The international investment position deficit increased to 34.9% of GDP. The Czech Republic's external debt totalled 37.9% of GDP at the year-end.

#### 1. THE CURRENT ACCOUNT

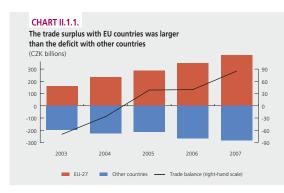

#### **1.1 GOODS**

The balance of goods trade, under the balance¹ of payments methodology, closed with a surplus of CZK 117.5 billion in 2007, i.e. an increase compared to 2006. The Czech foreign trade results were affected predominantly by continued inflow of FDI into manufacturing industry and continued economic growth in the EU. The terms of trade improved despite rising prices of crude materials on global markets.

According to the CZSO foreign trade statistics (exports in FOB prices, imports in CIF prices) analysed by territory, trade with EU Member States is the most significant area of goods trade. More than 85% of exports went to the EU, while 71% of imports were of EU origin. The trade surplus with EU Member States was considerably larger than the trade deficit with other countries. The trade surplus with the EU increased by CZK 65 billion year on year.

As regards other countries, the trade deficits with China, Japan and Taiwan increased year on year owing to rising imports, particularly of office machinery, electrical and telecommunication equipment and consumer goods. On the other hand, the trade deficit with Russia decreased year on year as a result of rising exports and lower imports of oil.

Turning to the foreign trade commodity structure, the machinery and transport equipment category accounted for the largest share of exports and imports and continued to grow. Other significant export items include manufactured goods classified by material and miscellaneous manufactured articles. Chemicals and fuels have significant shares on the import side.

Other services	143.3	139.6	-3.7

#### CHART II.1.4.

#### 1.1.1 Terms of trade

An increase in export prices of 1.3% and fall in import prices of 1% gave rise to a 2.3 percentage point improvement in the terms of trade in 2007. As regards export prices, the biggest rises were recorded by crude materials (12.6%) and food (12.2%). Falls in export prices were recorded by machinery and transport equipment and miscellaneous manufactured articles.

Import prices were down by 1% overall. The largest falls were recorded by prices of machinery and transport equipment (3.7%) (in particular office machinery and automated data-processing machines) and miscellaneous manufactured articles (3%). The strongest increases, on the other hand, were shown by import prices of oils and fats (14.4%) and crude materials (7.1%) (in particular metalliferous ores).

The improvement in the terms of trade was most pronounced in the categories of food, fuels and crude materials. The balance of trade result was especially boosted by favourable terms of trade in the machinery and transport equipment category. The only slight rise in export prices and drop in import prices were due in large part to appreciation of the koruna.

World prices of industrial raw materials and food increased in 2007 compared to 2006 as a result of demand from the dynamically growing economies of China and India and from financial investors. The aggregate index of world prices of raw materials and food recorded a year-on-year increase of 9.7%. Of the seven main categories, the rise in world prices was mostly due to metals, natural rubber and oil. North Sea Brent crude peaked at over USD 95 a barrel and Ural crude at USD 93 a barrel in 2007. Prices of food and oils, textile raw materials and leather rose as well.

#### 1.2 SERVICES

In 2007, the balance of services ended in a surplus of CZK 55.4 billion, with export growth outpacing import growth. The services surplus increased in year-on-year comparison.

The year-on-year improvement in services was due mainly to an improvement in the balance of international transport and, to a lesser extent, other business and non-business services, whereas net income from travel services decreased.

As regards international freight and passenger transport, the balance of freight services had a decisive effect on the resulting transport surplus. Freight accounted for 70% of exports and 75% of imports of transport services.

A major shift was seen with respect to the set of services closely related to transport (cargo handling, maintenance of transport equipment, agents' fees, flight control, etc.), which recorded a moderate surplus in 2007 (as against a deficit in 2006).

By contrast, passenger transport (with air transport dominating) recorded a fall in income and the resulting balance deteriorated.

Road freight transport retained its leading position in terms of volume and increase in surplus. The rail freight, air freight and, to a lesser extent, river freight surpluses also increased. By contrast, the sea freight deficit increased further.

The surplus with regard to pipeline transport of oil and natural gas remained at the previous year's level.

Foreign exchange receipts from foreign travel rose by 7.6% year on year.

The positive trend in such receipts was due to the interest of foreign visitors in weekend stays and medical tourism (spa facilities and specialised healthcare). The entry of the Czech Republic into the Schengen area in December 2007 was an important event for the further development of foreign travel.

According to CZSO data, the number of foreign guests staying at accommodation facilities increased by 3.8% year on year and the total number of overnight stays increased by 2.6%. Multi-star hotels recorded the largest rise (of 11.6%), while there was a decline in the number of tourists staying in chalets and hostels and on campsites.

Increased demand for accommodation services was seen in particular among tourists from the Russian Federation (up 34%), Slovakia (up 10%), the USA (up 25%) and Poland (up 9%). By contrast, the inflow of guests from Austria was flat (up 1%) and a decline in demand was recorded among guests from Germany (down 4%), the Netherlands (down 13%), Israel (down 8%) and Japan (down 6%).

The expenditure of Czech nationals on travel and stays abroad increased by 18.1% year on year.

According to the CZSO, long foreign trips made by Czech residents recorded a year-on-year increase of 14.6%. Czech tourists went mostly to Croatia. There was dynamic growth in demand for travel to Spain (up 32.5%), Slovakia (up 27.9%) and Tunisia (up 18.8%). Interest in short foreign trips combined with cheap flights from low-cost air airlines (euro-weekends) increased by 38%. The appreciation of the koruna against both the euro and the dollar made shopping for goods and services abroad a favourable option.

Payments in cash dominate the structure of foreign travel payments. However, the share of card transactions is gradually rising in line with the economic development of the country and the development and expansion of the cashless payment system (ATM and vendor networks). Payment card transactions accounted for 42.4% of foreign travel receipts in 2007.

The share of payments by cards issued for accounts with Czech banks in total foreign travel expenditure was 35.1%.

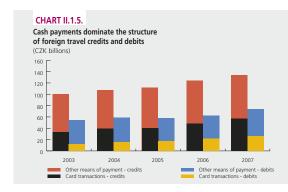

The balance of other services recorded a year-on-year increase in exports and a concurrent decline in imports. The resulting other services deficit shrank to CZK 33.6 billion.

In year-on-year comparison, growth was seen in foreign demand primarily for architectural, engineering and other technical services, followed by telecommunications services, legal, auditing and accounting services and advertising services.

Compared to 2006, less favourable results were recorded for computer and information services. Falling demand from abroad led to significantly reduced service volumes, while domestic firms showed increased interest in hardware and software imports.

Net transfers of funds relating to overhead and operating costs credited to foreign affiliates rose to CZK 5.1 billion in 2007. The loss on merchanting

TAB. II.1.5. The number of guests using (millions of people; nights)		dation fac	cilities rose	è	
	2003	2004	2005	2006	2007
Number of persons Average stay duration	5.1 4.3	6.1 3.1	5.7 2.9	6.5 3.1	6.7 3.1

increased, and there was a rise in expenditure on copyright, franchise and licence fees.

On the other hand, financial services recorded positive developments. A decline on the credit side was accompanied by a much larger reduction in expenditures. Improved services balances were seen for research and development and construction work.

For insurance services the credit side remained basically unchanged from the previous year, while the amounts remitted to foreign reinsurance companies dropped. Government services showed no major differences from the previous year on either the credit or debit side.

#### 1.3. INCOME

The income deficit increased further in 2007 to CZK 253.8 billion. The rise in debits reflected higher yields on equity investments for foreign investors and increased costs of employing foreign workers. The year-on-year increase of credits, on the other hand, was largely related to interest received.

In comparison with 2006, the number of foreign nationals employed in the Czech Republic increased by almost one-quarter. According to CZSO estimates, more than 256,500 such individuals were working in the country as of the end of the year. From the balance of payments perspective, the growing number of foreigners employed by Czech firms resulted in an increase in labour costs, including social security contributions, of 20%. The income of Czech nationals from working abroad was roughly the same as in the previous year. Despite the gradual opening of labour markets within the EU, the number of Czechs employed abroad recorded no major change. According to CZSO information, there were 27,600 of them at the year-end.

Dividends paid to domestic investors on their investments abroad grew to CZK 12.3 billion year on year, of which 71% went to portfolio investors. The volume of dividends paid from the profits of domestic direct investments abroad was lower than in 2006.

Thanks to the favourable performance of domestic companies, the total dividends paid to foreign owners of domestic companies and banks increased to CZK 113.8 billion. The increased dividends went mainly to direct investors, while portfolio investors recorded a year-on-year decrease in profits.

The estimated amount of earnings retained by foreign owners for further developing the companies they own in the Czech Republic increased to CZK 130.6 billion. By contrast, earnings reinvested abroad declined moderately. The figures for dividends and reinvested earnings are preliminary and will be revised based on a survey of direct investment in 2007.

Holdings of foreign bonds generated higher returns for domestic portfolio investors in year-on-year terms. The same applied to investments by foreign owners in Czech corporate bonds. Practically all the interest income came from holdings of long-term bonds.

The improved balance of interest on other financial assets and liabilities as compared to 2006 was due largely to the banking sector. More than 70% of the increase in net interest income was generated by higher income on CNB international reserves.

# TAB. II.1.6. Income on foreign investment in the Czech Republic increased the income deficit (CZK billions)

	2006	2007	Change

ote: 2007 dividends and reinvested earnings are estimated and will be revised

The government sector recorded higher interest paid abroad than in 2006. Aside from interest calculated from the value of the leasing contract for Swedish Gripen fighter aircraft, almost all the interest payments related to loans obtained from the EIB. Income received from abroad on previously provided government loans was insignificant.

The interest income of the corporate sector was practically unchanged compared to 2006. Interest paid abroad went up. This increase was distributed evenly between interest on financial loans from foreign banks (including financial intermediaries) and interest on trade credits.

#### 1.4 CURRENT TRANSFERS

Current transfers ended in a deficit of CZK 8.1 billion in 2007 (a slight increase compared to 2006). General government transfers dominated the credit side and private transfers the debit side.

The net outflow of funds from the Czech Republic to the EU budget recorded on the current account decreased to CZK 4.5 billion year on year.

The balance of other general government transfers was affected mainly by higher income tax payments and social security contributions as a result of the rising number of foreign nationals employed in the Czech Republic. On the debit side of the government balance, the amount of VAT refunded to non-residents increased and there was a modest rise in contributions to international institutions and in pensions paid abroad.

The private transfers deficit was affected by a higher outflow of gifts and inheritances, remittances and other household transfers. By contrast, payments of income tax and social insurance by Czech nationals working abroad decreased.

#### CHART II.3.1.

#### 2. THE CAPITAL ACCOUNT

The capital account ended 2007 in a surplus of CZK 19.7 billion. The capital account was affected primarily by receipts from EU structural funds (CZK 19.6 billion).

#### 3. THE FINANCIAL ACCOUNT

The net inflow of foreign capital onto the financial account reached CZK 104.5 billion in 2007, practically the same level as in 2006. The net inflow of foreign direct investment rose year on year. Portfolio investment and other investment ended in a deficit. In year-on-year comparison, these items recorded a higher net outflow of funds abroad.

#### 3.1 FOREIGN DIRECT INVESTMENT

#### 3.1.1 Czech direct investment abroad

Domestic investment abroad fell by 18.3% year on year in 2007, reaching CZK 27.1 billion. Investment in equity capital amounted to CZK 5.6 billion, while reinvested earnings totalled CZK 10.5 billion according to preliminary data. Direct investment loans rose to CZK 11.1 billion.

The investment went mostly into the electricity, gas and water supply industry (41.2%), the real estate and business services segments (29.6%) and the trade and repair industry (13.8%). The share of manufacturing increased, thanks to investments in manufacture of wood and wood products, paper and paper products, publishing and printing and manufacture of electrical machinery and apparatus. The investment in other industries was less significant or, in some cases, had the nature of disinvestment. Geographically, most investment was channelled into Georgia, Poland, the Netherlands and Slovakia.

#### 3.1.2 FDI in the Czech Republic

The FDI inflow to the Czech Republic increased year on year to CZK 185.3 billion. This increase was aided mainly by a rise in reinvested earnings to CZK 130.6 billion. Investment in equity capital amounted to CZK 57.5 billion and was executed largely through increases in ownership interests in existing foreign-owned companies and also through the establishment of new businesses in the form of acquisitions and greenfield investments. Compared to 2006, investment in high technology and service centres decreased and production capacity expansion projects dominated. Privatisation proceeds were negligible in 2007. Other capital flows under direct investment were dominated by the net repayment of loans provided by domestic subsidiaries to their foreign parent companies in previous years. The ratio of foreign direct investment to GDP increased to 5.2% in 2007.

The largest portion of the FDI (52.8%) went into the services sector, while 42.2% was absorbed by manufacturing and the remaining 5% was invested in the primary sector. As for industries, the main recipients of investment were real estate and business services (22.1%), financial intermediation (20.3%), manufacture of motor vehicles (14.2%) and trade and repairs (7.9%). The largest investor countries were the Netherlands (28.8%), Luxembourg (12.9%), Austria (11.7%) and Germany (8.3%). Investment from EU Member States accounted for 87.8% of the total.

#### 3.1.3 Returns on FDI in the Czech Republic

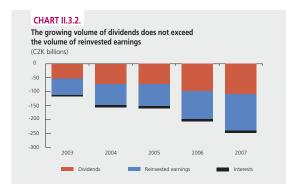

According to preliminary figures, the volume of dividends paid, reinvested earnings and interest on other capital continued rising in 2007. This was reflected in a year-on-year rise in the return on direct investment, which reached CZK 247.6 billion. Although the amount of dividends paid rose, it still lags behind reinvested earnings, which account for 53% of the total returns. The rate of return on the investment (i.e. the ratio of the return to the stock of FDI) grew to 13.4% year on year.

The volume of dividends from direct investments paid out to foreign investors reached CZK 108.8 billion in 2007 according to preliminary figures. Manufacturing accounted for more than one-third of the total dividends paid, while financial intermediation accounted for one-quarter. Significant dividends were also paid in transport and telecommunications. The nine most significant foreign-owned companies paid out over 50% of the dividend volume.

Reinvested earnings reached (according to preliminary figures) CZK 130.6 billion in 2007, which represents a year-on-year increase of 31%. More than 40% of the total reinvested earnings were generated in manufacturing, primarily in motor vehicle manufacturing.

Interest income of parent companies on loans provided to their subsidiaries in the Czech Republic totalled CZK 8.2 billion in 2007, accounting for about 3.3% of the total return.

# TAB. II.3.2. The rate of return on FDI in the Czech Republic is increasing (CZK billions) 2003 2004 2005 2006 2007<sup>a)</sup> Return 118.3 156.6 159.9 206.2 247.6 5tock of FDI 1,161.8 1,280.6 1,491.6 1,666.8 1,852.0 Rate of return (%) 10.2 12.2 10.7 12.4 13.4

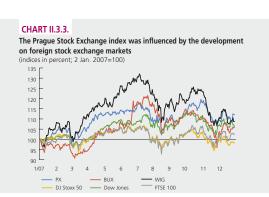

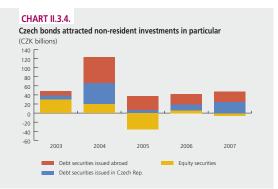

#### 3.2 PORTFOLIO INVESTMENT

#### 3.2.1 Money and capital markets

Numerous domestic and international economic factors shaped developments in the Czech money and capital markets. The key events included the outbreak of the US mortgage market crisis in the middle of the year. The USA's economic situation adversely affected world stock markets. The ECB continued tightening its monetary policy during the first half of 2007. Its key interest rate was gradually raised from 3.5% to 4.0%. The Fed, by contrast, lowered its official interest rate twice during the last quarter, by a total of 0.75 percentage point to 4.5%. The Fed was led by an effort to give financial institutions easier access to liquidity and, in particular, to reduce the expected slowdown of the US national economy resulting from the mortgage crisis. On the domestic interbank market, the 3-month PRIBOR rose by around 1.5 percentage point year on year. The negative interest rate differentials against dollar rates and especially against euro rates narrowed quickly. Foreign investors increased their holdings of koruna bond issues in their portfolios by CZK 24.3 billion in 2007.

The leading world stock markets were highly volatile during the year. The Prague Stock Exchange Index copied developments on foreign stock exchanges. The main PX index strengthened by 14.2% year on year. At the end of October it reached 1,936.1 points, but during the fourth quarter it weakened gradually, eventually falling to 1,815.1 points at the year-end. The decline in foreign investors' interest in Czech companies' shares was reflected in an outflow of equity portfolio investment of CZK 5.9 billion (CZK 13.7 billion in the third quarter).

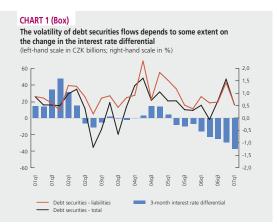

#### 3.2.2 Portfolio investment

The net outflow of portfolio investment increased to CZK 53.2 billion year on year. Czech investors showed increased interest in foreign equity and debt instruments. Foreign investors purchased debt securities issued by Czech entities both on the local market and internationally.

On the asset side, there was a capital outflow of CZK 94.6 billion. Around 65% was invested in foreign equity securities, while residents invested 35% in bonds.

The inflow of foreign capital in the form of portfolio investment totalled CZK 41.4 billion. Foreign investors were particularly interested in domestic koruna bonds and bonds issued by residents on foreign markets. By contrast, investment in Czech stocks and fund units declined.

#### BOX Impact of changes in the interest rate differential on portfolio investment in the case of debt securities

Debt portfolio investment flows are quite volatile (see the chart). Nevertheless, the evolution of portfolio investment flows is explained to some extent by the change in the interest rate differential. This relationship can be estimated using regression analysis (moving OLS, time window of three years) applied to the quarterly data from the period 1998:1–2007:2. Annual changes in debt securities (the overall balance and liabilities only) are explained by changes in the 3-month interest rate differential (DIF 3M) and the change in the real GDP growth rate differential (DIF GR). As more than 90% of foreign holders of portfolio debt securities issued in the Czech Republic come from the euro area,<sup>2</sup> the differentials are computed against the euro area (EU-12). The specification used has a relatively good explanatory power: R2 ranges between 0.37 and 0.65 for total debt securities and between 0.28 and 0.50 for liabilities. The table summarises the results of the individual equations where the coefficient of the change in the interest rate differential is statistically significant; the t-statistics are given in parentheses. The change in the investment volume is significantly affected by the change in the interest rate differential (see the table). A one percentage point increase in the 3-month interest rate differential on average increases the net inflow of debt securities by CZK 31.5 billion and liabilities by CZK 25.4 billion. The negative correlation (sometimes statistically insignificant) between the economic growth differential and investment, which is probably due to the low correlation of economic cycles between the Czech Republic and the euro area, appears to be in line with the available surveys of transition economies<sup>3</sup> and advanced economies<sup>4</sup>, which suggest that macroeconomic variables have a weak explanatory power for portfolio investment.

#### **3.3 FINANCIAL DERIVATIVES**

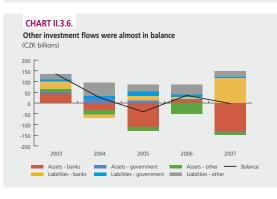

The year-on-year changes in the fair values of derivatives in banks' balance sheets were not large. Considerable volatility was observed in individual quarters. The surplus derivatives position vis-à-vis non-residents decreased in the third quarter and was probably related to changing flows of carry trades, a change in the koruna's exchange rate trend and later also to movements in koruna interest rates.

#### 3.4 OTHER INVESTMENT

A net outflow of capital of CZK 2.3 billion was recorded under other investment.

The banking sector recorded an outflow of funds abroad of CZK 16.7 billion (excluding portfolio investment). In particular, there was a rise in short-term deposits with foreign banks and lending to non-residents.

In net terms, the government sector obtained funds from abroad totalling CZK 2.2 billion. On the assets side, the main factor was an increase in the Czech Republic's deposits with international institutions. The liabilities side was affected above all by drawdowns of long-term EIB loans at both central and regional levels for infrastructure development.

The corporate sector recorded the highest inflow of capital, drawing foreign funds of CZK 12.2 billion in net terms. On the assets side, the outflow of funds mainly involved growth in export credits. On the liabilities side, there was an increase in import liabilities and drawdowns of financial loans.

#### TAB. II.4.1.

The CNB's international reserves cover almost three months' worth of goods and services imports

(C7K billions: months)

	2006	2007	Change	
CNB international reserves	656.6	631.0	-25.6	
Coverage of goods and services imports	3.4	2.9	-0.5	

#### TAB. II.5.1.

The Czech Republic's debtor position increased year on year (CZK billions)

	2006	2007	Change	
Assets	1,888.2	2,089.0	200.8	
Liabilities	2,969.2	3,329.3	360.1	
Net investment position	-1,081.0	-1,240.3	-159.3	

Under liabilities, unlike for gross debt, direct investment includes ownership interests as well as credit transactions and portfolio investment includes equity securities as well as debt securities.

#### TAB. II.5.2.

The investment position was most affected by direct investment (CZK billions)

1 -1.701.2	1001
3 50.1	-139.1 5.8 -1.8
	-25.2 11.7
3 -36.8 5 -277.3	-5.0 -5.7 -159.3
	3 50.1 9 15.1 9 632.7 4 77.1 8 -36.8

Under liabilities, unlike for gross debt, direct investment includes ownership interests as well as credit transactions and portfolio investment includes equity securities as well as debt securities.

#### 4. CNB INTERNATIONAL RESERVES

CNB international reserves adjusted for valuation changes increased by CZK 15.7 billion as a result of investment returns, only part of which were sold by the CNB on the foreign exchange market, and of transactions carried out for CNB clients. However, the international reserves fell by CZK 25.6 billion year on year due to valuation changes related to the koruna's appreciation against the dollar and the euro. The reserves cover almost three months' worth of goods and services imports.

#### 5. THE INVESTMENT POSITION, EXTERNAL DEBT AND DEBT SERVICE

#### **5.1 THE INVESTMENT POSITION**

The international investment position of the Czech Republic showed a deficit of CZK 1,240.3 billion at the end of 2007, which represents a year-on-year increase in its net debtor position. The resulting balance was affected mainly by a year-on-year increase in liabilities to CZK 3,329.3 billion. Foreign-owned companies recorded the largest growth in liabilities. Assets grew more moderately than liabilities. The largest increase in assets was recorded under other investment.

The debtor position under direct investment rose to CZK 1,701.2 billion year on year as a result of increases in the equity capital of foreign investors in domestic companies, including reinvested earnings. Direct investment liabilities rose to CZK 1,827.2 billion, while assets increased to CZK 126.0 billion.

Under portfolio investment (excluding the CNB), the net creditor position increased year on year to CZK 50.1 billion. The stock of non-residents' portfolio investments totalled CZK 556.3 billion at the year-end. The foreign investor portfolio showed a slight predominance of debt instruments (53%). Investment by Czech residents in foreign securities increased to CZK 606.4 billion. In terms of structure, investment in debt instruments also dominated.

The fair value of financial derivatives closed in a surplus of CZK 15.1 billion.

The CNB has the largest external creditor position (CZK 632.7 billion), owing to its international reserves holdings.

The net international position of commercial banks (excluding portfolio investment) showed a surplus of CZK 77.1 billion at the year-end.

The general government position (excluding portfolio investment) contributed a deficit of CZK 36.8 billion to the overall investment position balance. The government's debtor position widened moderately year on year.

Government assets fell as a result of deblocking operations and repayments of government loans. On the liabilities side, long-term loans obtained from international institutions increased.

The debtor position of the corporate sector (CZK 277.3 billion) increased year on year, mostly due to a rise in short-term liabilities.

#### **5.2 EXTERNAL DEBT**

The total external debt of the Czech Republic stood at CZK 1,348.8 billion at the end of 2007. According to estimates, koruna-denominated debt accounted for around 37.3% of this figure. The external debt of the Czech Republic rose by CZK 155.1 billion year on year. Short-term liabilities with maturities of up to one year recorded a higher increase, accounting for 31.3% of the total debt.

The corporate sector accounted for 51.4% of the total debt. Commercial banks contributed 28.4% and general government (central government and municipalities) 20.2%.

Loans had the biggest share in the total external debt (38.1%). Debt in the form of bonds stood at 21.1%. Deposits by non-residents with domestic banks accounted for 18.6% of the total. Direct investment loans contributed 12% and trade credits 8.1%.

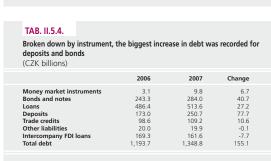

#### **5.3 DEBT SERVICE**

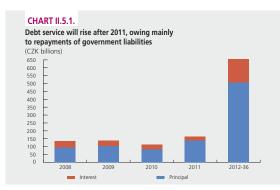

Debt service on long-term foreign liabilities amounted to CZK 125.2 billion in 2007. Repayments of principal totalled CZK 81.7 billion, while CZK 43.5 billion was paid in interest.

The largest portion of the debt service, at around 81%, was paid by the corporate sector. Corporations primarily repaid loans from foreign banks and investors. Commercial banks accounted for around 7% of the debt service, primarily through repayments of their long-term foreign liabilities. Repayments by the government sector, including municipalities and cities, represented 12% of the debt service. The CNB's debt repayments to the EIB were insignificant in terms of volume.

Debt-service financing represented around 4.4% of exports of goods and services for 2007.

TAB. II.5.3. The share of short-term debt (CZK billions)	increased slightly	,	
	2006	2007	Change
External debt, total short-term long-term Share of short-term debt	1,193.7 321.6 872.1 26.9%	1,348.8 422.1 926.7 31.3%	155.1 100.5 54.6 4.4%

The balance of payments statistics monitor transactions on accounts associated with transfers of funds between EU institutions, the Commission budget and institutions in the Czech Republic. Money from EU funds is credited to the National Fund of the Ministry of Finance, which is the payment agency for the implementation of structural operations. Payments for agricultural policy are revenues of a Ministry of Agriculture account established specifically for the purpose. The revenues are implemented in euros and for the purposes of the balance of payments are converted at the exchange rate used for the given

transaction. The amounts given in the survey in individual years refer to payments into the Czech Republic onto the accounts of central institutions, not the volumes of financial drawings by economic entities in the Czech Republic. Transfers of own resources are implemented in korunas from the Ministry of Finance account and are converted into euros using the exchange rate midpoint effective on the transaction date.

#### 1. REVENUES FROM THE EU BUDGET

Since 2007, **the pre-accession aid** programmes have been closed to the Czech Republic with respect to new applications. Only final payments upon completion of projects or returns of unused funds are being carried out. In January 2007, the Czech Republic received the final payment of CZK 124.1 million under the SAPARD programme. Returns from PHARE amounted to CZK 3.4 million. The ISPA instrument was terminated for new applicants back on 30 April 2004 and replaced by drawings from the Cohesion Fund under the Structural Operations<sup>5</sup> chapter.

EU subsidies for farmers totalled CZK 19.2 billion in 2007. The Czech Republic received almost CZK 0.2 billion under **Agriculture** for market measures. Revenues for direct payments to farmers amounted to CZK 10.7 billion in 2007. For projects under the Rural Development programme, the Czech Republic received total payments of CZK 8.4 billion from the EU in 2007 (of which CZK 3 billion under the 2004–2006 budget period and advance payments of CZK 5.4 billion under the 2007–2013 budget period). A total of CZK 49 million was received for the veterinary measures in 2007. Agricultural subsidies represent revenue to the account of the Ministry of Agriculture chapter and will subsequently be credited to the State Agricultural Intervention Fund, which is the payment agency for the administration of subsidies and payments to farmers.

Under **Structural Operations**, the Czech Republic received a total of CZK 27.3 billion in 2007. CZK 20.6 billion was received from the structural funds, of which CZK 13.8 billion under the 2004–2006 budget period. At the year-end, advance payments of CZK 6.8 billion were received under the 2007–2013 period. Euro-denominated resources from the EU represent revenue to the National Fund of the Ministry of Finance and, after conversion into korunas, are transferred in tranches to the accounts of payment units and from there paid out to the final recipients. The Czech Republic received CZK 6.7 billion from the Cohesion Fund in 2007, of which CZK 3.7 billion under the 2004–2006 budget period and CZK 3 billion under the 2007–2013 budget period. Applications for payments from the Cohesion Fund are settled on the basis of specific infrastructure or environmental projects.

Under **Internal Policies**, the Czech Republic received almost CZK 1 billion in 2007. The Czech Republic, as an EU Member State, is a recipient of aid from the EC's Transitional Instrument. Funds received under this instrument in 2007 totalled CZK 0.3 billion. Internal policies are also implemented with the use of Community programmes, which are focused on supporting "smaller" programmes in education, science and research, business and research capacities, culture, the information society, consumer protection and many others. The 2007 survey of financial flows includes payments for Community programmes totalling CZK 0.7 billion. Payments for programmes organised by the largest national agencies (the Czech National Agency Mládež (Youth) and Eurodesk, the Centre for International Services of the Ministry of Education and the National Education Fund) were included in the survey on the basis of direct statistical determination.

Revenues include also the off-budgetary assistance funds — the EEA Financial Instrument and bilateral aid from Norway. Under these two financial mechanisms, the EEA countries/Norway have undertaken to contribute to the economically weaker states in the European Economic Area by providing grants for investment and development projects in priority areas, such as conservation and renewal of cultural heritage, environmental protection, support for the judicial system, and health and childcare. In 2007, the Czech Republic received CZK 77 million in aid from the EEA countries (the approved projects are posted on the Ministry of Finance website).

<sup>5</sup> Payments from the Cohesion Fund received for earlier approved ISPA projects are shown in the survey under the item Structural Operations – Cohesion Fund.

#### 2. PAYMENTS TO THE EU BUDGET

The Czech Republic's payments to the EU budget are made in Czech korunas in regular monthly instalments and totalled CZK 32.2 billion in 2007. These are advance payments, and final settlement will always be performed retrospectively after the end of the period according to the relevant definitive statistical data and taking into consideration the euro-koruna exchange rate in the given period. The largest-volume item is the GNI-based resource, followed by the VAT resource and the UK rebate. Traditional EU resources, such as customs duties and sugar levies, account for the smallest share.

### 3. PAYMENTS OF CAPITAL TO THE EIB AND THE ECB AND CONTRIBUTION TO THE RESEARCH FUND FOR COAL AND STEEL

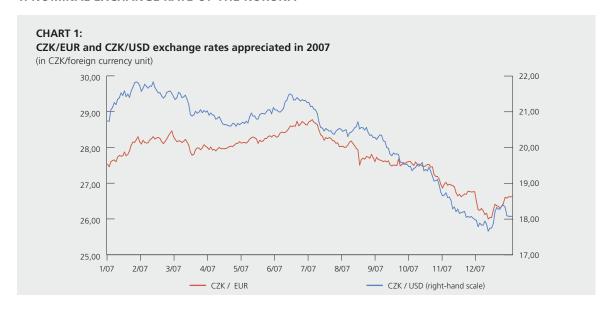

**Further payments of capital and reserves of the European Investment Bank**, totalling CZK 1.5 billion, were made in March and September 2007. Owing to the accession of Bulgaria and Romania to the EU and Slovenia's entry into the euro area, **the capital of ECB** and the key for the subscription of capital by the individual national central banks changed as of 1 January 2007. This resulted in a slight reduction in the Czech Republic's share in the subscribed capital and the CNB obtained a rebate of CZK 2.3 million against the amount paid on 1 May 2004. The Czech Republic's second contribution to **the Research Fund for Coal and Steel** of CZK 220.4 million was paid in January 2007.

#### 4. SUMMARY

The net position of the Czech Republic in respect of the EU budget, calculated as the difference between total revenues from and payments to the EU budget, ended 2007 in a surplus of CZK 15.4 billion. Including payments outside the Commission budget, the surplus with the EU fell to CZK 13.7 billion. In the balance of payments, mutual transfers are recorded on the current account under government transfers. The deficit on current transfers from the EU was CZK 4.4 billion in 2007. Transfers from the EU Cohesion Fund and the transfer of part of the advance and ongoing payments under structural operations are recorded on the capital account. The capital transfers surplus associated with EU structural operations amounted to CZK 19.6 billion. The payment of capital and reserves of the EIB is included in the financial account and showed a deficit of CZK 1.5 billion.

#### **EXCHANGE RATE OF THE KORUNA**

#### 1. NOMINAL EXCHANGE RATE OF THE KORUNA

In the course of the year, the koruna appreciated by almost 4% against the euro and nearly 13% against the dollar. During the first half of the year, the koruna had a depreciation tendency, due to traditional dividend conversions and also to koruna sales linked with carry trades featuring the koruna as the financing currency. There was also a transitory effect of negative sentiment towards the CEE currencies.

The koruna started strengthening in July, due partly to the termination of carry trades, i.e. sales of higher-yielding currencies and purchases of the koruna, and also to the sharp depreciation of the dollar on world markets. Technical factors, financial investment in the koruna by foreign investors and interest rate increases by the CNB also gradually started to have an effect. At the end of the year, the koruna reversed its gains slightly as foreign investors realised the profit on their long positions in koruna.

#### 2. EFFECTIVE EXCHANGE RATES OF THE KORUNA

Nominal effective exchange rate of the koruna

The nominal effective exchange rate (NEER), expressed as a basic index, shows the appreciation (index > 100) or depreciation (index < 100) of the national currency against a basket of selected currencies for a certain time period relative to a base period (2005). The NEER index is calculated in two alternatives as the weighted geometrical average of the nominal exchange rates taking into account the weighted shares of 26 countries covering approximately 90% of the total Czech foreign trade. The NEER is computed in a time series as the monthly average and yearly average on the 2005 base for 12 currency areas. In the calculation, the euro area countries' exports and imports are taken into consideration as a single weight using the koruna-euro exchange rate.

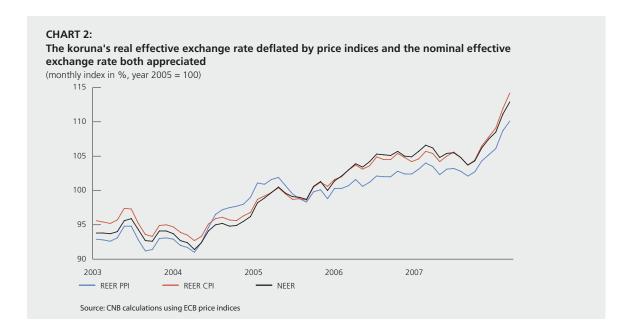

TABLE 1: Nominal effective exchange rate of the	koruna	in %										
						2007						
(monthly figures; year 2005 = 100)	1	2	3	4	5	6	7	8	9	10	11	12
Weights: foreign trade turnover	106.2	104.8	105.4	105.5	104.8	103.7	104.3	106.2	107.5	108.5	111.1	112.9
Weights: foreign trade turnover SITC 5-8	106.5	105.1	105.7	105.9	105.1	104.0	104.7	106.6	107.9	108.9	111.5	113.3
appreciation > 100; depreciation < 100												

The koruna's NEER index strengthened by 1.9% year on year on average in 2007. The same trend was seen for the koruna NEER index that uses the foreign trade turnovers for SITC 5–8 as the weights (a year-on-year appreciation of 2.0%). The appreciation trend of the koruna's NEER, which had emerged back in the second quarter of 2004, thus continued into 2007. Most of the 2007 appreciation occurred in the first and, in particular, the fourth quarter. The koruna's NEER strengthened by 6.4% year on year in December 2007. The year-on-year appreciation was supported primarily by the koruna's appreciation against the euro and the dollar. The magnitude of that appreciation was moderated by movements in the exchange rates of the Slovak koruna, Hungarian forint and Polish zloty, against which the koruna depreciated.

#### Real effective exchange rates of the koruna

In 2007, the koruna's average real effective exchange rate (REER) index rose by 2.5% year on year when deflated by consumer prices and by 2.4% when deflated by industrial producer prices (foreign trade turnover weights). The REER was affected mainly by the koruna's nominal exchange rate. The effect of higher domestic consumer and producer price inflation compared to the euro area countries, Poland and Slovakia was less significant.

TABLE 2: Real effective exchange rate of the kor	una in 🤋	% defla	ted by	price ir	ndices

The koruna's REER index deflated by unit labour costs increased by 3.1% year on year on average, owing to faster growth in domestic unit labour costs than foreign unit labour costs. Using the GDP deflator, the average REER index of the koruna increased by 2.7% year on year.

# CHART 2 The short-term external debt/external reserves ratio is above 100 % (in %) 200 150 2003 2004 2005 2006 2007

Reserves/debt service incl. short-term debt

#### **DEBT INDICATORS OF EXTERNAL STABILITY**

The debt indicators of the external stability of the Czech Republic, which focus on the amount and dynamics of external debt and debt service, comply with the recommendations contained in the International Monetary Fund and World Bank publication "External Debt Statistics" (2003).

The indicators were favourably affected in 2007 by growth in the performance and export capacity of the economy. The ability of the economy to repay external liabilities remains stable.

#### External debt/GDP

The external debt to GDP ratio in 2007 (38%) stayed constantly above the level considered sensitive. The slight year-on-year increase in the indicator was related to growing indebtedness of the banking and corporate sectors.

#### External debt/exports

The ability of the economy to repay the external debt by exports of goods and services improved. Around six months' worth of goods and services exports were sufficient to repay the external debt in 2007.

#### International reserves/short-term debt

The CNB's international reserves at the end of 2007 exceeded the level of rapidly mobilisable external debt (short-term liabilities including debt service on long-term debt in the respective year) by around 15%. Despite a downward trend, the level of coverage can be considered sufficient.

#### Debt service/GDP

Debt service expenditure dropped below the GDP growth figure in 2007 (to 3.5%) as a result of the faster pace of growth of the Czech economy and a lower rate of use of long-term loans by the corporate sector.

#### Debt service/exports

Approximately 5% of annual goods and services exports were sufficient to cover repayments of medium-term and long-term debt in 2007. The year-on-year decline in the indicator reflected a nominal decline in debt service and dynamic growth in goods and services exports.

#### **BALANCE OF PAYMENTS FOR JANUARY TO DECEMBER 2007**
