List of Annexes

1) The information in Tables 3-14 are based on monetary statistics of CNB harmonized with monetary statistics of European System of Central Banks. The data are not seasonally adjusted and the last period data are always preliminary.

2) All the data quoted in this Publication are included in the ARAD database (Time series database - ARAD >> Money and banking statistics >> Monetary statistics >> Monetary Statistics Publication).

Interest rates

Commentary on key interest rates (Table 1) and financial market interest rates (Table 2): April 2007

Key interest rates

The CNB's 2W repo rate has been set at 2.5% since the end of September 2006 and the ECB's key interest rate has been re-set at 3.75% since mid-March 2007. The difference between the ECB's and the CNB's key rates is thus 1.25 percentage point.

Financial market interest rates

Interest rates on the interbank deposit market grew at a modest pace in both the Czech Republic and the euro area. The difference between interest rates in the two regions under review widened slightly again this month, reaching about 1.35 percentage points on average across all maturities. The three-month PRIBOR was 2.60%, while the three-month EURIBOR rose to 3.97%.

Bond yields on the capital market increased compared to the previous month in both the Czech Republic and the euro area, and the growth rates in the two regions were comparable. The 10-year bond yield rose to 3.92% in the Czech Republic and to 4.23% in the euro area.

¹⁾ Monetary aggregates comprise monetary liabilities of MFIs vis-à-vis non-MFI Czech residents excluding central government. M1 is the sum of currency in circulation and overnight deposits; M2 is the sum of M1, deposits with an agreed maturity of up to two years and deposits redeemable at notice of up to three months; and M3 is the sum of M2, repurchase agreements, money market fund shares/units and debt securities up to two

²⁾ Including all sectors without general government (S.13) and MFIs sector (S.121 and S.122).

³⁾ Net foreign assets (NFA) represent balance of financial claims and liabilities of the MFI sector vis-à-vis nonresidents

⁴⁾ Net value of flow data calculated by adjusting the difference between end-of-period levels for the effect of non-transactions-related factors.

Comments on monetary developments statistics¹⁾ (Tables 3-9): April 2007

The annual rate of growth of M3 rose from 13.9% in March to 14.3 % in April. The month-on-month growth rate increased from 0.3% to 3.2%. As a result of financial transactions, the monetary aggregate M3 grew by CZK 272.1 billion year on year (by CZK 67.4 billion month on month) to CZK 2,173.6 billion.

Main components of M3

With the largest contribution to M3 growth, the monetary aggregate M1 remains the most important component of M3, accounting for more than two-thirds of the annual M3 growth (Table 7).

The annual rate of growth of M1 rose by 0.3 percentage point, from 14.8% in March to 15.1% in April. The annual rate of growth of overnight deposits increased in the same way from 15.6% in March to 15.9 % in April. Their month-on-month growth was 4.4%. Within overnight deposits, deposits of other financial intermediaries recorded the largest month-on-month increase of 14.7% (CZK 3 billion). Deposits of other government rose by 13.5% (CZK 13.1 billion). The household sector and non-financial intermediaries recorded the same increase of 3.5% month on month (CZK 19.5 billion, CZK 12.3 billion respectively). In contrast, insurance corporations and pension funds showed a decline of 29% (CZK 2.1 billion).

The annual rate of growth of currency in circulation decreased slightly to 12.3% in April from 12.4% in March. In month-on-month terms, currency in circulation increased by 2% (an increase of CZK 6 billion due to financial transactions).

Other short-term deposits (excluding overnight deposits) grew by CZK 15.3 billion (i.e. 2.2 %) month on month, owing to financial transactions. The annual rate of growth of these deposits increased by 0.7 percentage points, from 15.3% in March to 16% in April. Deposits redeemable at notice of up to three months (the smaller component) have long been recording strong annual growth. Their annual growth rate in April was 28.8%. The annual rate of growth of deposits with maturity of up to two years, which are the dominant component of short-term deposits, increased by 1.1 percentage point compared to the previous month, reaching 11.7%.

Within other short-term deposits month-on-month increases were recorded for deposits of almost all sectors. The most visible growth was recorded for other financial intermediaries (of 20.5%, or CZK 3.6 billion). Substantially smaller increase was shown by other government (of 4.1%, or CZK 0.9 billion), non-financial corporations (of 2.8%, or CZK 6.1 billion) and households (of 1.1%, or CZK 4.7 billion). Deposits of insurance corporations and pension funds remained unchanged at the previous month's level.

Marketable instruments, which consist of repos, money market fund shares/units and debt securities with maturities of up to two years, increased slightly to CZK 66 billion in April 2007 from CZK 65.8 billion in March. Their annual rate of growth rose by 0.3 percentage point year on year to -12.1% (compared to -12.4% in March).

Main counterparts of M3

The annual rate of growth of loans extended to general government has long been negative and was -24.5% in April (-24.9% in March). The annual rate of growth of purchased government bonds increased to 15.6% in April from 15.1% in March.

The annual rate of growth of loans extended to the private sector remained almost at the same level as in March, i.e. 21.5% (21.4% in March). This growth was mostly attributable to households. They account for more than one-half of the annual rate of growth of loans to the private sector (Table 8). The annual growth rates of loans to households have been high for a long time; in April 2007 the growth rate was 31.7%. Non-financial corporations are another sector accounting for a significant proportion of the annual rate of growth of loans to the private sector. Their annual rate of growth decreased from 20.1% in March to 19.6% in April.

The annual rate of growth of net external assets increased from 0.2% in March to 2.3% in April. The annual rate of growth of long-term financial liabilities increased from 3.4% to 4.1%. The annual rate of growth of deposits by central government rose from -5.2% to 0.6%.

¹⁾ All increases and decreases referred to in this commentary relate only to financial transactions adjusted for non-transaction effects.

¹⁾ The interest rates that are applied by MFIs to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. New business refers to any new agreement between the customer and the MFI within given period.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15) according to the classification of the economic sectors ESA95.

³⁾ Households deposits liabilities redeemable at notice include similar deposits of non-financial corporations of which volumes are negligible in this category.

⁴⁾ Including deposit liabilities redeemable at notice of non-financial corporations (which are also included in item 1.3).

⁵⁾ Bank overdrafts include provided bank overdrafts, debit balance on bank accounts and credit card credits.

⁶⁾ The initial period of fixations is a predetermined period of time at the start of the contract during which the value of the interest rate cannot change. Period up to 1 year includes floating rates.

⁷⁾ Annual percentage rate of charge (APRC) covers total costs of the credit to the client including charges etc.

¹⁾ The interest rates that are applied by MFIs to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. Interest rates on outstanding amounts refer to the stock of all deposits and all loans at a specific moment.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15) according to the classification of the economic sectors ESA95.

³⁾ Including overnight deposits and deposits with agreed maturity presented in Table 10. For this instrument category, new business and outstanding amounts coincide.

⁴⁾ Consumer credit and other lending include bank overdrafts presented in Table 10.

Commentary on MFI interest rates (Tables 10 and 11): April 2007

Interest rates on new business

In April 2007, the overall average interest rate on **new deposits** of households and non-financial corporations remained exactly at the previous month's level.

The average rate on new deposits of **households** was 0.99% for the fifth consecutive month. Interest rates on the individual types of deposits were also the same as in the previous three months (changes of only ± 0.01 percentage point). The interest rate was 0.42% on overnight deposits, 1.86% on deposits with agreed maturity and 1.99% on deposits redeemable at notice.

The interest rate on new deposits of **non-financial corporations** was the same as in March 2007, i.e. 1.44%. The small rise (of 0.03 percentage point) in the rate on overnight deposits to 0.77% was offset by a slight decrease in the rate on deposits with agreed maturity of up to two years to 2.21% (which usually account for 100% of all deposits with agreed maturity in this sector).

New loans provided by banks to households recorded a rise in the overall average interest rate in April. The interest rate on loans to non-financial corporations increased as well, albeit only slightly.

The price of new loans to **households** was somewhat higher and the average interest rate increased by 0.22 percentage point to 10.77%. The rise in the overall rate was due to bank overdrafts (16.01%) and other loans (5.93%) which recorded a rate increase of about 0.25 percentage point. By contrast, the rate on consumer credit decreased by a third of a percentage point to 11.63% and the average interest rate on loans for house purchase remained roughly at the previous month's level (4.51% in April 2007).

The average interest rate on new loans to **non-financial corporations** increased only slightly (by 0.02 percentage point), to 4.44%. This small increase in the overall interest rate was due to a modest rise in the rate on bank overdrafts to 4.90%. By contrast, the rates on other loans of both up to CZK 30 million and over CZK 30 million decreased moderately (to 4.60% and 3.53% respectively).

The total APRC on loans to households increased after four months, albeit insignificantly (by 0.02 percentage point), to 6.75%. The APRC on consumer credit fell to 12.14% and that on loans for house purchase remained at the level comparable with March 2007, i.e. at 4.74%.

Interest rates on outstanding amounts

The interest rates on **outstanding amounts of deposits** of households and non-financial corporations in April 2007 were the same as in the previous month.

The average interest rate on **household** deposits stood at 1.26% for the third consecutive month. Outstanding amounts of all other types of deposits were also remunerated at rates comparable with March 2007 (with only minimal changes of up to + 0.01 percentage point). The interest rate on deposits with agreed maturity decreased slightly for the fifth consecutive month, reaching 1.92%. By contrast, the rate on outstanding amounts on deposits redeemable at notice was 0.01 percentage point higher – at 1.99%. The rate charged by banks on overnight deposits of households was 0.42%, the same as the previous month.

The interest rate on outstanding amounts of deposits of **non-financial corporations** was 1.30% (a slight increase of 0.01 percentage point from March 2007). The average rate on overnight deposits was 0.77%, a rise of 0.03 percentage point compared to the previous month. By contrast, the average interest rate on deposits with agreed maturity moved in the opposite direction, falling slightly to 2.11%.

In April 2007, the overall average interest rate on **outstanding amounts of loans** to households and non-financial corporations charged by banks was slightly lower than in the previous month.

Outstanding amounts of loans to **households** have long recorded a gradual decline in the average interest rate, standing at 6.65% this month. The decrease in the overall rate was again attributable to both loans for house purchase (4.85%) and consumer credit and other loans (to 10.98%).

The overall average interest rate on outstanding amounts of loans to **non-financial corporations** fell slightly, to 4.54%. The average interest rate on loans fell by 0.01 percentage point across all maturities under review.

Commentary on the quarterly aggregated balance sheet of collective investment funds (Table 12): March 2007

As of the end of Q1, collective investment funds (CIFs) administered assets worth CZK 82.5 billion. This means that the value of assets administered by these funds rose by CZK 4.2 billion in Q1, which represents a quarter-on-quarter increase of 5.31%. Compared to the same period of 2006, the increase was 15.73%, or CZK 11.2 billion.

The largest growth in administered assets was recorded by mixed funds, whose assets grew from CZK 28.7 billion to CZK 30 billion, which represents a quarter-on-quarter increase of 4.82%. Growth was also recorded by funds of funds (from CZK 13.9 billion to CZK 14.9 billion) and equity funds (from CZK 11.4 billion to CZK 12.2 billion). By contrast, bond funds recorded a fall in assets of CZK 0.4 billion to CZK 24 billion, i.e. a decline of 1.67%.

The funds most frequently invested in debt securities, particularly those issued by the general government of the Czech Republic. The total volume of purchased debt securities was CZK 35.7 billion, accounting for 43.24% of CIF equity capital. Compared to the previous quarter, the share of debt securities in equity capital increased by 0.19 percentage points and dropped by 6.48 percentage points in year-on-year comparison.

The biggest rise in volume compared to the previous quarter was recorded by purchased debt securities. The investment in debt securities increased by CZK 1.95 billion, i.e. up by 5.77% in quarter-in-quarter terms. The investment in shares recorded the largest increase in year-on-year terms. The volume of funds invested in shares grew by CZK 5.6 billion, up by 28.93%.

At the end of Q1, 79 resident collective investment funds were operating in the Czech Republic, of which 13 were equity funds, 19 funds of funds, 29 mixed funds, 13 bond funds, 4 funds of qualified investors and 1 real estate fund.

Commentary on the quarterly aggregated balance sheet of financial corporations engaged in lending (Tables 13, 14): December 2006

As of 31 December 2006, financial corporations engaged in lending had total assets of CZK 327.9 billion. Total assets rose by CZK 8.1 billion compared to the previous quarter. This represents a quarterly increase of 2.5%. Overall total assets increased by CZK 24.3 billion, i.e. 8% year on year. Financial leasing companies, whose total assets amounted to CZK 237.9 billion, accounted for the largest share of total assets. Companies providing other lending contributed CZK 90.1 billion to the overall total assets

The largest asset item was loans, which amounted to CZK 259.3 billion, up by CZK 10.1 billion compared to the third quarter. The loans rose by CZK 22.2 billion year on year, which represents a year-on-year growth by 9.4%. Short-term loans stood at CZK 76.2 billion at the end of Q4. i.e. 23.2% of total assets. Long-term loans amounted to CZK 183.1 billion, i.e. 55.8% of total assets. The loans were provided almost entirely to residents.

The largest part of the loans provided to residents consisted of loans to non-financial corporations, which amounted to CZK 135.3 billion, i.e. 52.9 % of loans to residents. Loans provided to non-financial corporations rose by CZK 3.3 billion compared to Q3, i.e. a quarterly increase of 2.5%. Overall total assets increased by CZK 6.2 billion, i.e. 4.8% year on year. CZK 131.7 billion was provided by financial leasing companies and CZK 3.6 billion by companies providing other lending. These loans are made up predominantly of loans with a maturity of one to five years, which amounted to CZK 85.3 billion.

The second largest category of loans provided to residents was loans to households, which totalled CZK 117.2 billion, up by CZK 6.3 billion. This represents an increase of 5.7%. Overall total assets provided to households increased by CZK 12.2 billion, i.e. 11.6% year on year. These loans account for 45.8% of loans granted to residents. CZK 57.5 billion was provided by financial leasing companies and CZK 59.6 billion by companies providing other lending. Loans with a maturity of one to five years amounted to CZK 71.6 billion, giving them the largest share in loans to households.

¹⁾ Under Decree No. 307/2004 Coll. these are companies whose main or major business activity involves providing credit or loans or entering into agreement of similar nature, e.g. financial leasing, factoring, consumer credit, hire-purchase financing, etc. The figures mentioned only include financial leasing companies and other lending companies. Data for factoring have not yet been published.

Glossary

Harmonisation of statistics: the Treaty establishing the European Community tasked the European Central Bank (ECB) with ensuring harmonised statistics according to Article 5 of the Statute of the European System of Central Banks. The national central banks of EC Member States therefore collect statistical information according to a uniform definition, from which the ECB then compiles aggregate data for euro area monetary policy. Although Council Regulation No 2533/98, which specifies the requirements for statistical data collection, only concerns euro area countries, the ECB also receives full data sets from the non-participating countries (e.g. the Czech Republic) in order to monitor their economic and financial development.

Monetary statistics: financial macrostatistics of sectors S.121, S.122 and S.123 based exclusively on the "host country" principle. According to this principle, a resident reporting unit is an institution resident in a given economic territory. The reporting population includes 1) institutions incorporated and located in the territory, including subsidiaries of parent companies located outside that territory, and 2) branches of institutions that have their head office outside that territory.

APRC: annual percentage rate of charge, i.e. the rate including interest expenses and all related costs of the credit to the client (fees etc.).

Collective investment funds: for the purposes of monetary and banking statistics, collective investment funds comprise unit trusts and investment funds other than money market funds which are resident in the Czech Republic. These are undertakings the sole object of which is collective investment, i.e. pooling investor funds and investing them under conditions stipulated in the Act on Collective Investment (No. 189/2004 Coll.). Such undertakings may be constituted under the Act either as unit trust managed by an investment company or as investment funds.

Consolidated balance sheet of the MFI sector: the basic statistical tool of monetary statistics. It is based on the residency principle and is obtained by netting out inter-MFI positions on their aggregated balance sheet.

Consumer credit: loans granted to households for personal use in the consumption of goods and services.

Contribution to annual growth rate: the growth rate of a selected component weighted by its share in the total growth rate.

Deposits redeemable at notice: deposits that can be withdrawn by clients only after the expiry of a period of notice agreed in advance, which starts at the moment of notification of the intention to withdraw the deposit.

Deposits with agreed maturity: deposits than cannot be withdrawn by clients before a predefined maturity.

FCLs - Type of services:

1. *Financial leasing* - It is financial service, when lessee acquires the right to use good in exchange for rental payment over predetermined term. All risk and rewards of ownership are transferred from lessor to lessee. After lapse of predetermined term ownership of good is transferred from lessor to lessee.

2. *Factoring* - It is financial service consisting in purchase of short-term receivables (with maturity 30-90 days) before their maturity date. Receivables are transferred on factoring company – factor- by supplier of goods or services.

3. *Other lending* - This category encompass granting credit or loans or agreements of similar nature different from financial leasing and factoring. It deals especially with consumer credit, hire purchase, consumption loans, etc.

Financial corporations engaged in lending (FCLs): FCLs mean corporations classified within sector S.123 other financial intermediaries which are predominantly engaged in granting credit or loans or entering into agreements of similar nature, for example financial leasing, faktoring, consumere credit, hire purchase, etc. (see Decree No. 307/2004 Coll.)

Growth rate: the percentage change in the monitored variable over the reference period, calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month.

Household sector: institutional units included in the sectors of households (S.14) and non-profit institutions serving households (S.15) under ESA 95.

Glossary (cont'd)

Housing loans: Loans granted to households for the purpose of purchasing/investing in housing, including building and home improvements.

Interest rate fixation: a period of interest rate fixation, i.e. a period at the beginning of a contract for which the agreed interest rate cannot be changed. Period up to 1 year includes floating rates.

MFI longer-term financial liabilities: comprise deposits with an agreed maturity of over two years, deposits redeemable at a period of notice of over three months, debt securities issued with an original maturity of more than two years and the capital and reserves of the Czech MFI sector.

Monetary aggregates: comprise the monetary liabilities of monetary financial institutions to non-MFI Czech residents except central government. The narrow monetary aggregate M1 includes currency in circulation (excluding cash at banks' cash desks) and overnight deposits. The intermediate monetary aggregate M2 comprises M1, deposits redeemable at a period of notice of up to and including three months and deposits with a maturity of up to and including two years. The broad monetary aggregate M3 comprises M2, money market fund shares/units, debt securities with a maturity of up to two years and repurchase agreements.

Monetary financial institutions (MFIs): financial institutions forming the money-issuing sector. Under Community law, these include the central bank, resident credit institutions, and all other resident financial institutions whose business is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credit and/or invest in securities. In the Czech Republic, MFIs include the central bank, banks, money market funds and credit unions.

Money-holding sector: all institutional units except central government (S.1311) and monetary financial institutions (S.121 and S.122) under ESA 95.

Money-issuing sector: all institutional units included in the sectors of the central bank (S.121) and other monetary financial institutions (S.122) under ESA 95.

Money-neutral sector: an institutional sector comprising the central government sector (S.1311) under ESA 95.

Money market funds: MMFs are defined as those collective investment funds of which the units are, in terms of liquidity, close substitutes for deposits and which primarily invest in money market instruments and/or in MMF shares/units and/or in other transferable debt instruments with a residual maturity of up to and including one year, and/or in bank deposits, and/or which pursue a rate of return that approaches the interest rates of money market instruments. The criteria applied in order to identify MMFs shall be derived from the public prospectus as well as fund rules, instruments of incorporation, established statutes or by-laws, subscription documents or investment contracts, marketing documents, or any other statement with similar effects, of the collective investment undertaking.

Net external assets: comprise external assets of Czech MFIs (such as monetary gold, non-koruna banknotes, securities issued by non-residents and loans granted to non-residents) minus external liabilities of the Czech MFI sector (such as non-residents' holdings of deposits, repurchase agreements, money market fund shares and units, and debt securities with a maturity of up to and including two years issued by MFIs and held by non-residents).

Non-MFIs: all resident sectors excluding MFIs, i.e. general government (S.13), non-financial corporations (S.11), financial institutions other than MFIs (S.123 and S.124) and households and non-profit institutions serving households (S.14 and S.15) under ESA 95.

Other financial intermediaries (OFIs): entities included in the sectors of other financial intermediaries except insurance corporations and pension funds (S. 123), financial auxiliaries (S.124) and insurance corporations and pensions funds (S.125) under ESA 95.

Private sector: a sector comprising all institutional sectors except general government (S.13) and monetary financial institutions (S.121 and S.122) under ESA 95.

Glossary (cont'd)

Rates on new business: interest rates agreed by the bank and the client for all agreements negotiated during the reference period.

Rates on outstanding amounts: interest rates applied to end-of-period balances.

Reclassifications: comprise any changes in the MFI balance sheet resulting from changes in the reporting population, corporate restructuring, reclassifications of assets and liabilities, and corrections of reported errors.

Residents: all domestic and foreign legal entities and natural persons, including branches of foreign banks and foreign owners of buildings and land, whose centre of economic interest is in the given territory. Foreign legal entities and natural persons are considered residents after at least one year of economic activity in the territory, with the exception of foreign bank branches and owners of buildings and land, who become residents at the moment they perform a valid legal act (in the case of foreign owners of buildings and land, this only applies in connection with transactions relating to the building or land in question).

Transaction (flow) data: values related to the whole period which are calculated as the difference between the balances at the end of the current and the previous period adjusted for non-transaction effects, i.e. effects connected with reclassifications, valuation changes and exchange rate variations over the period. These factors result in breaks in time series, thereby affecting the comparability of end-of-period balances. Transaction (flow) data only reflect those changes that arise from transactions, i.e. from accepting financial assets or providing financial liabilities.

Unit trusts other than money market funds:

1. *equity funds and funds of funds* – funds that constantly invest 66% or more of their assets on the equity market (i.e. in shares and instruments bearing equity risk) and/or funds that constantly invest 66% or more of their assets in the units and shares of other unit trusts/investment funds. Equity funds also include index funds and guaranteed funds linked to stock indices.

2. *bond funds* – funds that constantly invest on the bond market. Additional investment in equities is allowed, but the share of equities must not exceed 10% of the fund's assets. Bond funds also include index funds and guaranteed funds linked to bond indices.

3. *mixed funds* – funds that invest in various assets (equities and bonds) on various markets and do not have limits on the share of equities or bonds.

Technical Notes

A. Calculation of growth rates

The growth rate for the reference period is calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month. Monthly transactions are calculated from differences in outstanding amounts adjusted for reclassifications, other revaluations, exchange rate variations and other changes which do not arise from transactions. This data thus reflects only those changes that arise from accepting financial assets or providing financial liabilities. Reclassifications and other non-transaction corrections are introduced into the transaction statistics to preserve the comparability of the gradual monitoring results, thereby enabling calculation of the indices of expected outstanding balances of the monitored variables and determination of their growth rates.

Method of calculation

1. The month-on-month percentage change a_t^M for month t is calculated as:

$$(a) \quad a_t^M = \left(\frac{F_t^M}{L_{t-1}} \right) \times 100$$

2. The annual growth rate for month t , i.e. the change for the last 12 months ending with month t , is calculated as the product of the twelve coefficients for each previous month. The calculation of the annual growth rate from the month-on-month growth rates thus enables transaction changes and non-transaction effects in the individual months to be taken into account.

$$(b) \quad a_t = \left[\prod_{i=0}^{11} \left(1 + \frac{F_{t-i}^M}{L_{t-1-i}} \right) - 1 \right] \times 100$$

where

F_t^M - transactions in month t

$F_t^M = (L_t - L_{t-1}) - C_t^M - E_t^M - V_t^M$

and

L_t - outstanding amount at the end of month t

C_t^M - reclassifications in month t

E_t^M - exchange rate variations in month t

V_t^M - valuation changes in month t

Growth rates for other reference periods are derived from formula (b).

B. Calculation of the contribution to the annual growth rate of a monitored variable (e.g. M3)

If $a_t(M3)$ represents the annual growth rate of M3 for the year ending with month t , and $F_{t-i}(M1)$, $F_{t-i}(M2-M1)$, $F_{t-i}(M3-M2)$ are the monthly transactions of the components M1, M2-M1 and M3-M2 in month $t-i$, the contribution of M1 to the annual growth rate of M3, for example, is calculated as:

$$\frac{\sum_{i=0}^{11} F_{t-i}(M1)}{\sum_{i=0}^{11} [F_{t-i}(M1) + F_{t-i}(M2-M1) + F_{t-i}(M3-M2)]} \times a_t(M3)$$
