Interest rates

Commentary on key interest rates (Table 1) and financial market interest rates (Table 2): July 2006

Key interest rates

At the beginning of August, the ECB increased its key interest rate to 3.00%. The CNB increased its 2W repo rate to 2.25% at the end of July. The differential between the key interest rates of the CNB and the ECB thus remained 0.75 percentage point, unchanged from May and June 2006.

Financial market interest rates

Interest rates

As in June, money market interest rates in the Czech Republic increased (with the exception of the CZEONIA reference rate, which fell by 0.28 percentage point to 1.66%). Their rate of growth was higher than in the euro area. The three-month PRIBOR stood at 2.29%, while the three-month EURIBOR rose to 3.10%.

Bond yields increased in both the Czech Republic and the euro area (with the exception of a slight decrease in bond yields for the 10-year maturity of 0.01 percentage point in the Czech Republic). The growth rate of bond yields was higher than in the euro area, particularly for the 3-year maturity, where yields were up by 0.22 percentage point to 3.23%.

¹⁾ Monetary aggregates comprise monetary liabilities of MFIs vis-à-vis non-MFI Czech residents excluding central government. M1 is the sum of currency in circulation and overnight deposits; M2 is the sum of M1, deposits with an agreed maturity of up to two years and deposits redeemable at notice of up to three months; and M3 is the sum of M2, repurchase agreements, money market fund shares/units and debt securities up to two

²⁾ Including all sectors without general government (S.13) and MFIs sector (S.121 and S. 122).

³⁾ Net foreign assets (NFA) represent balance of financial claims and liabilities of the MFI sector vis-avis nonresidents

⁴⁾ Net value of flow data calculated by adjusting the difference between end-of-period levels for the effect of non-transactions-related factors.

Commentary on the monetary statistics¹⁾ (Tables 3–9): July 2006

The annual rate of growth of M3 rose from 12.7% in June to 13.1% in July. The month-on-month growth rate increased from 0.8% to 1.2%. As a result of financial transactions, M3 grew by CZK 226.4 billion year on year (and by CZK 22.1 billion month on month), to CZK 1,948.9 billion.

Main components of M3

With the largest contribution to M3 growth, the monetary aggregate M1 remains the most important component of M3. M1 accounts for more than four-fifths of the annual M3 growth (see Table 7).

The annual rate of growth of M1 increased from 15.3% in June to 17.9% in July. Similarly, the annual rate of growth of overnight deposits rose from 16.8% in June to 20.2% in July. In month-on-month terms, overnight deposits rose by 4.9%. Within overnight deposits, all components recorded month-on-month increases. Deposits of insurance corporations and pension funds recorded fastest month-on-month growth of 57.8% (CZK 4.8 billion). Deposits of non-financial corporations were up by 7.5% (CZK 24.6 billion), deposits of other government by 10.4% (CZK 9.8 billion) and deposits of other financial intermediaries by 7.9% (CZK 1.3 billion). Household deposits increased slightly by 1.3% (CZK 6.6 billion).

The annual rate of growth of currency in circulation decreased slightly from 10.6% in June to 10.3% in July. In month-on-month terms, currency in circulation fell by 0.3% (a decline of CZK 0.8 billion due to financial transactions).

Other short-term deposits (excluding overnight deposits) fell by CZK 23.3 billion (i.e. 3.8%) month on month, owing to financial transactions. The annual rate of growth of these deposits decreased to 4% (by 3.8 percentage points) in July from 7.8% in June. Deposits redeemable at notice of up to three months (the smaller component) have long been recording strong annual growth. Their annual growth rate in July was 45.9%. The annual rate of growth of deposits with maturity of up to two years, which are the dominant component of short-term deposits, declined by 4.9 percentage points compared to the previous month, reaching -6%.

Within other short-term deposits, deposits of insurance corporations and pension funds fell by 7.5% (CZK 12.5 billion) month on month. Deposits of non-financial corporations declined by 30% (CZK 7.3 billion) and deposits of other financial intermediaries by 18.6% (CZK 2.9 billion). By contrast, deposits of other government recorded an increase of 50.2% (CZK 9.7 billion) and household deposits were up by 1% (CZK 3.5 billion).

Marketable instruments, which consist of repos, money market fund shares/units and debt securities with maturities of up to two years, remained almost unchanged from June (i.e. roughly at CZK 72 billion). Their annual rate of growth dropped by 0.8 percentage point compared to the previous month, to 13.3% (14.1% in June).

Main counterparts of M3

The annual rate of growth of loans extended to general government has long been negative and was -35.5% in July (-31.9% in June). The annual rate of growth of purchased government bonds increased by 1 percentage point to 4.9% (3.9% in June). In absolute terms, total general government debt to MFIs fell from CZK 459.0 billion in July 2005 to CZK 434.1 billion in July 2006, of which loans decreased from CZK 108.0 billion to CZK 69.4 billion.

The annual rate of growth of credit to the private sector rose from 21.5% in June to 22.7% in July. This growth was mostly attributable to households, which account for more than one-half of the annual rate of growth of loans to the private sector (see Table 8). The annual growth rates of loans to households have been high for a long time; in July 2006, the growth rate was 32.9%. Non-financial corporations are another sector accounting for a large proportion of the annual rate of growth of loans to the private sector. Their annual rate of growth rose from 17.9% to 19.8%.

The annual rate of growth of net external assets declined from 0.6% in June to -1.2% in July. The annual rate of growth of long-term financial liabilities decreased from 5.8% to 4.2%. The annual growth rate of deposits of central government fell from -6% to -10.7%.

1) All increases and decreases referred to in this commentary relate only to financial transactions adjusted for non-transaction effects.

¹⁾ The interest rates that are applied by resident credit institutions and other MFIs, excluding central banks and money market funds, to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. New business refers to any new agreement between the customer and the MFI within given period.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15).

³⁾ Households deposits liabilities redeemable at notice include similar deposits of non-financial corporations of which volumes are negligible in this category

⁴⁾ Including deposit liabilities redeemable at notice of non-financial corporations (which are also included in item 1.3).

⁵⁾ Overdrafts, i.e. permitted or unpermitted debits

⁶⁾ The data on interest rates of mortgage loans were not published by the CNB from 31 March 2005 to 31 December 2005 because of uncertainty in the interpretation of the definition of mortgage loans.

⁷⁾ The initial period of fixations is a predetermined period of time at the start of the contract during which the value of the interest rate cannot change. Period up to 1 year includes floating rates.

⁸⁾ Annual percentage rate of charge (APRC) covers total costs of the credit to the client including charges etc.

(4.3) Over 5 years	4,75	122,7	4,58	154,4	4,58	157,6	4,59	162,0

¹⁾ The interest rates that are applied by resident credit institutions and other MFIs, excluding central banks and money market funds, to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. Interest rates on outstanding amounts refer to the stock of all deposits and all loans at a specific moment.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15).

³⁾ Including overnight deposits and deposits with agreed maturity presented in Table 10. For this instrument category, new business and outstanding amounts coincide.

⁴⁾ The data on interest rates of mortgage loans were not published by the CNB from 31 March 2005 to 31 December 2005 because of uncertainty in the interpretation of the definition of mortgage loans.

Commentary on MFI interest rates (Tables 10 and 11): July 2006

Interest rates on new business

Interest rates on **new deposits** of households and non-financial corporations remained broadly unchanged.

Interest rates on overnight **deposits of households**, which have been declining since May, reached 0.35%. Rates on deposits with agreed maturity rose by 0.02 percentage point to 1.41%, while rates on deposits redeemable at notice remained unchanged from the previous month.

Interest rates on overnight **deposits of non-financial corporations** increased by 0.08 percentage point to 0.70%. Rates on deposits with agreed maturity decreased by 0.04 percentage point to 1.71%.

By contrast with the previous two months, interest rates on new **loans to households** increased by 0.86 percentage point to 11.01% overall, of which bank overdrafts rose to 15.85%, consumer credit to 12.71%, housing loans to 4.40% and other loans to 5.82%. Only rates on building savings loans fell moderately by 0.04 percentage point to 4.82%.

The overall average interest rate on new **loans to non-financial corporations** declined by 0.2 percentage point to 3.84%, due mainly to the average interest rate on bank overdrafts, which fell by 0.47 percentage point to 4.17%. The interest rate on other loans of up to CZK 30 million increased by 0.02 percentage point to 4.46% and that on other loans of over CZK 30 million decreased by 0.07 percentage point to 3.09%.

The overall **annual percentage rate of charge** on loans to households grew by 0.11 percentage point to 6.74%, while the APRC on consumer credit rose by only 0.01 percentage point to 13.92% and the APRC on housing loans increased by 0.07 percentage point to 4.60%.

Interest rates on outstanding amounts

The overall average interest rates on **outstanding amounts of deposits of households** again recorded a moderate decrease of 0.01 percentage point to 1.18%, the lowest level observed over the last seven months. Conversely, the overall average interest rate on **outstanding amounts of deposits of non-financial corporations** rose by 0.02 percentage point month-on-month, to 1.04%.

The average interest rate on **outstanding amounts of loans to households** continued to decrease, reaching 6.91%. Rates on outstanding amounts fell by 0.03 percentage point (to 5.02%) for housing loans and by 0.05 percentage point (to 11.32%) for consumer credit and other loans.

At 4.15%, the average interest rate on outstanding amounts of **loans to non-financial corporations** was the lowest since October 2005. This was due chiefly to the interest rate on loans with maturities of up to 1 year, which declined to 3.77%. By contrast, interest rates on outstanding amounts of loans with maturities over 1 year and up to 5 years and over 5 years rose slightly in July.

Balance sheet total - breakdown by investment policy

Commentary on the quarterly aggregated balance sheet of collective investment funds (Table 12): June 2006

As at the end of Q2, collective investment funds managed assets of CZK 72.1 billion. Thus, assets managed by collective investment funds increased by CZK 0.8 billion in Q2, up by 1.06% on the previous quarter. They rose by 34.46% compared to the same period a year earlier, which represents an increase of CZK 18.5 billion.

In Q2, the highest increase was recorded by funds of funds, whose assets rose by 21.18% quarter on quarter, from CZK 9.7 billion to 11.7 billion. Equity funds and mixed funds also grew, from CZK 9.2 billion to CZK 9.6 billion and from CZK 25.7 billion to CZK 25.8 billion, respectively. By contrast, bond funds recorded a decline in assets of CZK 1.9 billion, or 6.95%, to 24.9 billion.

Funds invested mostly in securities, particularly in debt securities issued by the Czech Republic's government institutions. Total purchases of debt securities were CZK 33.9 billion, reaching 47.03% of the own funds of collective investment funds. This represents a decrease of 2.69 percentage points compared to Q1. In year-on-year terms, the ratio of purchased debt securities to own funds fell by 12.06 percentage points. Purchased fund units recorded the largest increase compared to the previous quarter. Investment in units rose by CZK 1.4 billion (14.1%) compared to the previous quarter. In year-on-year terms, investment in units increased by CZK 7.3 billion. The volume of purchased fund units was CZK 11.7 billion. Investment in shares recorded the largest year-on-year increase. As at the end of Q2, purchased shares held by collective investment funds amounted to CZK 20.7 billion. Compared to the same period a year earlier, this represents an increase of CZK 7.7 billion (59.2%).

As at the end of Q2, 60 resident collective investment funds were active in the Czech Republic, of which 10 equity funds, 15 funds of funds, 12 bond funds and 23 mixed funds were registered.

Glossary

Harmonisation of statistics: the Treaty establishing the European Community tasked the European Central Bank (ECB) with ensuring harmonised statistics according to Article 5 of the Statute of the European System of Central Banks. The national central banks of EC Member States therefore collect statistical information according to a uniform definition, from which the ECB then compiles aggregate data for euro area monetary policy. Although Council Regulation No 2533/98, which specifies the requirements for statistical data collection, only concerns euro area countries, the ECB also receives full data sets from the non-participating countries (e.g. the Czech Republic) in order to monitor their economic and financial development.

Monetary statistics: financial macrostatistics of sectors S.121, S.122 and S.123 based exclusively on the “host country” principle. According to this principle, a resident reporting unit is an institution resident in a given economic territory. The reporting population includes 1) institutions incorporated and located in the territory, including subsidiaries of parent companies located outside that territory, and 2) branches of institutions that have their head office outside that territory.

APRC: annual percentage rate of charge, i.e. the rate including interest expenses and all related costs of the credit to the client (fees etc.).

Collective investment funds: for the purposes of monetary and banking statistics, collective investment funds comprise unit trusts and investment funds other than money market funds which are resident in the Czech Republic. These are undertakings the sole object of which is collective investment, i.e. pooling investor funds and investing them under conditions stipulated in the Act on Collective Investment (No. 189/2004 Coll.). Such undertakings may be constituted under the Act either as unit trust managed by an investment company or as investment funds.

Consolidated balance sheet of the MFI sector: the basic statistical tool of monetary statistics. It is based on the residency principle and is obtained by netting out inter-MFI positions on their aggregated balance sheet.

Consumer credit: loans granted to households for personal use in the consumption of goods and services.

Contribution to annual growth rate: the growth rate of a selected component weighted by its share in the total growth rate.

Deposits redeemable at notice: deposits that can be withdrawn by clients only after the expiry of a period of notice agreed in advance, which starts at the moment of notification of the intention to withdraw the deposit.

Deposits with agreed maturity: deposits than cannot be withdrawn by clients before a predefined maturity.

Growth rate: the percentage change in the monitored variable over the reference period, calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month.

Household sector: institutional units included in the sectors of households (S.14) and non-profit institutions serving households (S.15) under ESA 95.

Housing loans: Loans granted to households for the purpose of purchasing/investing in housing, including building and home improvements.

Interest rate fixation: a period of interest rate fixation, i.e. a period at the beginning of a contract for which the agreed interest rate cannot be changed. Period up to 1 year includes floating rates.

MFI longer-term financial liabilities: comprise deposits with an agreed maturity of over two years, deposits redeemable at a period of notice of over three months, debt securities issued with an original maturity of more than two years and the capital and reserves of the Czech MFI sector.

Monetary aggregates: comprise the monetary liabilities of monetary financial institutions to non-MFI Czech residents except central government. The narrow monetary aggregate M1 includes currency in circulation (excluding cash at banks' cash desks) and overnight deposits. The intermediate monetary aggregate M2 comprises M1, deposits redeemable at a period of notice of up to and including three months and deposits with a maturity of up to and including two years. The broad monetary aggregate M3 comprises M2, money market fund shares/units, debt securities with a maturity of up to two years and repurchase agreements.

Glossary (cont'd)

Monetary financial institutions (MFIs): financial institutions forming the money-issuing sector. Under Community law, these include the central bank, resident credit institutions, and all other resident financial institutions whose business is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credit and/or invest in securities. In the Czech Republic, MFIs include the central bank, banks, money market funds and credit unions.

Money-holding sector: all institutional units except central government (S.1311) and monetary financial institutions (S.121 and S.122) under ESA 95.

Money-issuing sector: all institutional units included in the sectors of the central bank (S.121) and other monetary financial institutions (S.122) under ESA 95.

Money-neutral sector: an institutional sector comprising the central government sector (S.1311) under ESA 95.

Money market funds: MMFs are defined as those collective investment funds of which the units are, in terms of liquidity, close substitutes for deposits and which primarily invest in money market instruments and/or in MMF shares/units and/or in other transferable debt instruments with a residual maturity of up to and including one year, and/or in bank deposits, and/or which pursue a rate of return that approaches the interest rates of money market instruments. The criteria applied in order to identify MMFs shall be derived from the public prospectus as well as fund rules, instruments of incorporation, established statutes or by-laws, subscription documents or investment contracts, marketing documents, or any other statement with similar effects, of the collective investment undertaking.

Net external assets: comprise external assets of Czech MFIs (such as monetary gold, non-koruna banknotes, securities issued by non-residents and loans granted to non-residents) minus external liabilities of the Czech MFI sector (such as non-residents' holdings of deposits, repurchase agreements, money market fund shares and units, and debt securities with a maturity of up to and including two years issued by MFIs and held by non-residents).

Non-MFIs: all resident sectors excluding MFIs, i.e. general government (S.13), non-financial corporations (S.11), financial institutions other than MFIs (S.123 and S.124) and households and non-profit institutions serving households (S.14 and S.15) under ESA 95.

Other financial intermediaries (OFIs): entities included in the sectors of other financial intermediaries except insurance corporations and pension funds (S. 123), financial auxiliaries (S.124) and insurance corporations and pensions funds (S.125) under ESA 95.

Private sector: a sector comprising all institutional sectors except general government (S.13) and monetary financial institutions (S.121 and S.122) under ESA 95.

Rates on new business: interest rates agreed by the bank and the client for all agreements negotiated during the reference period.

Rates on outstanding amounts: interest rates applied to end-of-period balances.

Reclassifications: comprise any changes in the MFI balance sheet resulting from changes in the reporting population, corporate restructuring, reclassifications of assets and liabilities, and corrections of reported errors.

Residents: all domestic and foreign legal entities and natural persons, including branches of foreign banks and foreign owners of buildings and land, whose centre of economic interest is in the given territory. Foreign legal entities and natural persons are considered residents after at least one year of economic activity in the territory, with the exception of foreign bank branches and owners of buildings and land, who become residents at the moment they perform a valid legal act (in the case of foreign owners of buildings and land, this only applies in connection with transactions relating to the building or land in question).

Glossary (cont'd)

Transaction (flow) data: values related to the whole period which are calculated as the difference between the balances at the end of the current and the previous period adjusted for non-transaction effects, i.e. effects connected with reclassifications, valuation changes and exchange rate variations over the period. These factors result in breaks in time series, thereby affecting the comparability of end-of-period balances. Transaction (flow) data only reflect those changes that arise from transactions, i.e. from accepting financial assets or providing financial liabilities.

Unit trusts other than money market funds:

1. *equity funds and funds of funds* – funds that constantly invest 66% or more of their assets on the equity market (i.e. in shares and instruments bearing equity risk) and/or funds that constantly invest 66% or more of their assets in the units and shares of other unit trusts/investment funds. Equity funds also include index funds and guaranteed funds linked to stock indices.
2. *bond funds* – funds that constantly invest on the bond market. Additional investment in equities is allowed, but the share of equities must not exceed 10% of the fund's assets. Bond funds also include index funds and guaranteed funds linked to bond indices.
3. *mixed funds* – funds that invest in various assets (equities and bonds) on various markets and do not have limits on the share of equities or bonds.

Technical Notes

A. Calculation of growth rates

The growth rate for the reference period is calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month. Monthly transactions are calculated from differences in outstanding amounts adjusted for reclassifications, other revaluations, exchange rate variations and other changes which do not arise from transactions. This data thus reflects only those changes that arise from accepting financial assets or providing financial liabilities. Reclassifications and other non-transaction corrections are introduced into the transaction statistics to preserve the comparability of the gradual monitoring results, thereby enabling calculation of the indices of expected outstanding balances of the monitored variables and determination of their growth rates.

Method of calculation

1. The month-on-month percentage change a_t^M for month t is calculated as:

$$(a) \quad a_t^M = \left(\frac{F_t^M}{L_{t-1}} \right) \times 100$$

2. The annual growth rate for month t , i.e. the change for the last 12 months ending with month t , is calculated as the product of the twelve coefficients for each previous month. The calculation of the annual growth rate from the month-on-month growth rates thus enables transaction changes and non-transaction effects in the individual months to be taken into account.

$$(b) \quad a_t = \left[\prod_{i=0}^{11} \left(1 + \frac{F_{t-i}^M}{L_{t-1-i}} \right) - 1 \right] \times 100$$

where

F_t^M - transactions in month t

$$F_t^M = (L_t - L_{t-1}) - C_t^M - E_t^M - V_t^M$$

and

L_t - outstanding amount at the end of month t

C_t^M - reclassifications in month t

E_t^M - exchange rate variations in month t

V_t^M - valuation changes in month t

Growth rates for other reference periods are derived from formula (b).

B. Calculation of the contribution to the annual growth rate of a monitored variable (e.g. M3)

If $a_t(M3)$ represents the annual growth rate of M3 for the year ending with month t , and $F_{t-i}(M1)$, $F_{t-i}(M2-M1)$, $F_{t-i}(M3-M2)$ are the monthly transactions of the components M1, M2-M1 and M3-M2 in month $t-i$, the contribution of M1 to the annual growth rate of M3, for example, is calculated as:

$$\frac{\sum_{i=0}^{11} F_{t-i}(M1)}{\sum_{i=0}^{11} [F_{t-i}(M1) + F_{t-i}(M2-M1) + F_{t-i}(M3-M2)]} \times a_t(M3)$$
