List of Annexes

1) The information in Tables 3-14 are based on monetary statistics of CNB harmonized with monetary statistics of European System of Central Banks. The data are not seasonally adjusted and the last period data are always preliminary.

2) All the data quoted in this Publication are included in the ARAD database (Time series database - ARAD >> Money and banking statistics >> Monetary statistics >> Monetary Statistics Publication).

Interest rates

Commentary on key interest rates (Table 1) and financial market interest rates (Table 2): December 2006

Key interest rates

The CNB's 2W repo rate has been 2.5% since the end of September 2006. The ECB's key interest rate was raised to 3.5% in December 2006; the difference between the ECB's and CNB's key rates is thus one percentage point.

Financial market interest rates

As in the previous month, interbank deposit market rates decreased in the Czech Republic, although the December decrease was more pronounced. The development in the euro area was different; interest rates there continued to follow an upward trend, with the 1-month EURIBOR recording the biggest increase of 0.22 percentage point to 3.64%. The difference between money market interest rates in the Czech Republic and the euro area thus widened further in the latest month under review. The three-month PRIBOR reached 2.56%, while the three-month EURIBOR rose to 3.68%.

On the Czech capital market, yields on bonds with 3-year maturity recorded a slight increase to 3.20%, whereas bonds with longer maturities saw a decline in yields (of 0.10–0.14 percentage point). In the euro area, bond yields rose slightly (by around a tenth of a percentage point) across all maturities. The 10-year bond yield fell to 3.68% in the Czech Republic and rose to 3.90% in the euro area.

¹⁾ Monetary aggregates comprise monetary liabilities of MFIs vis-à-vis non-MFI Czech residents excluding central government. M1 is the sum of currency in circulation and overnight deposits; M2 is the sum of M1, deposits with an agreed maturity of up to two years and deposits redeemable at notice of up to three months; and M3 is the sum of M2, repurchase agreements, money market fund shares/units and debt securities up to two

²⁾ Including all sectors without general government (S.13) and MFIs sector (S.121 and S. 122).

³⁾ Net foreign assets (NFA) represent balance of financial claims and liabilities of the MFI sector vis-avis nonresidents

⁴⁾ Net value of flow data calculated by adjusting the difference between end-of-period levels for the effect of non-transactions-related factors.

Commentary on the monetary statistics¹⁾ (Tables 3–9): December 2006

The annual rate of growth of M3 grew from 12.6% in November to 13.8% in December. The month-on-month growth rate increased from 0.6% to 1.9%. As a result of financial transactions, the monetary aggregate M3 grew by CZK 250.2 billion year on year (by CZK 38.7 billion month on month) to CZK 2,049.9 billion.

Main components of M3

The monetary aggregate M1 remains the most important component of M3 and is the biggest contributor to M3 growth and accounts for more than two-thirds of the annual M3 growth (Table 7).

The annual rate of growth of M1 fell from 15.4% in November to 14.7% in December. The annual rate of growth of overnight deposits decreased from 16.7% in November to 15.5% in December. The month-on-month decline of overnight deposits was 1%. Within overnight deposits, deposits of insurance corporations and pension funds recorded the largest month-on-month decline of 55 % (CZK 9.6 billion). Deposits of other financial intermediaries fell by 6% (CZK 1.2 billion), deposits of other government decreased by 7.8 % (CZK 7.3 billion) and deposits of households were down by 0.7% (CZK 3.5 billion). Overnight deposits of non-financial corporations rose by 2.8% (CZK 10.6 billion).

The annual rate of growth of currency in circulation increased by 0.8 percentage point from 11.2% in November to 12% in December. In month-on-month terms, currency in circulation rose by 1.1% (an increase of CZK 3.3 billion as a result of financial transactions).

Other short-term deposits (excluding overnight deposits) increased significantly by CZK 48.8 billion (i.e. 8 %) month on month, owing to financial transactions. In December, the annual rate of growth of these deposits was up by 6.2 percentage points to 14.3% (8.1% in November). Deposits redeemable at notice of up to three months (the smaller of components) have long been recording strong annual growth. Their annual growth rate in December was 38.3%. The annual rate of growth of deposits with maturity of up to two years, which are the dominant component of short-term deposits, declined by 8.3 percentage points compared to the previous month, reaching 6.7%.

Within other short-term deposits, deposits of insurance corporations and pension funds recorded the largest increase (36.6%, i.e. CZK 7.6 billion). Deposits of non-financial corporations rose by 12.7% (CZK 22.5 billion), deposits of other financial intermediaries were up by 6.8% (CZK 1 billion) and those of households increased by 5.5% (CZK 20.6 billion). By contrast, deposits of other government fell by 12.5% (CZK 2.9 billion).

Marketable instruments, which consist of repos, money market fund shares/units and debt securities with maturities of up to two years, fell slightly to CZK 65.4 billion in December (from CZK 67.9 billion in November). Their annual rate of growth dropped by 6.3 percentage points month on month to -4.3 % (compared to 2 % in November).

Main counterparts of M3

The annual rate of growth of loans extended to general government has long been negative and was -24.4% in December (-32.7% in November). The annual rate of growth of purchased government bonds increased from 8.2% in November to 12.2% in December.

The annual rate of growth of loans granted to the private sector declined modestly from 22.2% in November to 21.6% in December. Households provide the largest contribution to this growth. They account for more than one-half of this annual rate of growth of loans granted to the private sector (Table 8). The annual growth rates of loans to households have long been high; in December 2006 the figure was 30 %. Non-financial corporations are another sector accounting for a considerable proportion of the annual rate of growth of loans to the private sector. Their annual rate of growth rose from 21.7% to 22.5%.

The annual rate of growth of net external assets increased slightly from -1.9% in November to -1.8 % in December. The annual rate of growth of longer-term financial liabilities increased from 1.1 % to 1.9%. The annual rate of growth of deposits from central government rose from -16.2 % to -11.9%.

1) All increases and decreases referred to in this commentary relate only to financial transactions adjusted for non-transaction effects.

¹⁾ The interest rates that are applied by resident credit institutions and other MFIs, excluding central banks and money market funds, to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. New business refers to any new agreement between the customer and the MFI within given period.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15).

³⁾ Households deposits liabilities redeemable at notice include similar deposits of non-financial corporations of which volumes are negligible in this category

⁴⁾ Including deposit liabilities redeemable at notice of non-financial corporations (which are also included in item 1.3).

⁵⁾ Overdrafts, i.e. permitted or unpermitted debits

⁶⁾ The data on interest rates of mortgage loans were not published by the CNB from 31 March 2005 to 31 December 2005 because of uncertainty in the interpretation of the definition of mortgage loans.

⁷⁾ The initial period of fixations is a predetermined period of time at the start of the contract during which the value of the interest rate cannot change. Period up to 1 year includes floating rates.

⁸⁾ Annual percentage rate of charge (APRC) covers total costs of the credit to the client including charges etc.

¹⁾ The interest rates that are applied by resident credit institutions and other MFIs, excluding central banks and money market funds, to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. Interest rates on outstanding amounts refer to the stock of all deposits and all loans at a specific moment.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15).

³⁾ Including overnight deposits and deposits with agreed maturity presented in Table 10. For this instrument category, new business and outstanding amounts coincide.

⁴⁾ The data on interest rates of mortgage loans were not published by the CNB from 31 March 2005 to 31 December 2005 because of uncertainty in the interpretation of the definition of mortgage loans.

Commentary on MFI interest rates (Tables 10 and 11): December 2006

Interest rates on new business

The overall average interest rate on **new deposits** of households continued to grow at a modest pace, whereas the rate on deposits of non-financial corporations was slightly lower than in the previous month.

After five months of growth, the average interest rate on new deposits of **households** reached 0.99%. The interest rate on overnight deposits was about the same as in the previous month, at 0.41%. The increase in the overall average interest rate on deposits was thus mostly due to a modest rise in rates on deposits redeemable at notice (of 0.05 percentage point to 1.97%) and deposits with agreed maturity (of 0.02 percentage point to 1.83%).

The overall average interest rate on deposits of **non-financial corporations** fell slightly in December to 1.32%, owing to a decrease in the average interest rate on overnight deposits (of 0.07 percentage point) to 0.72%. By contrast, the interest rate on deposits with agreed maturity of up to two years (which as a rule account for 100% of all deposits with agreed maturity in this sector) rose slightly for the third consecutive month, reaching 2.20% in December.

New loans provided by banks to households and non-financial corporations recorded a decline in overall average interest rates in December.

The overall interest rate on new loans provided to **households** in December decreased significantly to 10.77% (down by about a third of a percentage point). This decrease was, however, due to a change in the shares of the individual types of loans in total loans; the shares of bank overdrafts and consumer credit (i.e. loans with relatively high interest rates) in the total decreased by almost 5 percentage points. The share of loans for house purchase remained unchanged, whereas that of other loans (with lower interest rates) was almost 5 percentage points higher in December compared to the previous period. Real interest rates on the individual types of loans did not decrease, showing rather the opposite trend: rates on bank overdrafts and loans for house purchase remained at the previous month's level in general, and rates on consumer credit and other loans showed a modest rise (of up to 0.05 percentage point).

A decrease of 0.17 percentage point to 4.58% in the interest rate on bank overdrafts resulted in a fall in the overall average interest rate on new loans to **non-financial corporations** to 4.20%. Other loans (of both up to CZK 30 billion and over CZK 30 billion) recorded an insignificant rise in interest rates (of up to 0.04 percentage point).

The overall annual percentage rate of charge on loans to households fell considerably in December by almost 0.43 percentage point to 7.02%. Nonetheless, the APRC on consumer credit rose to 13.52% and that on loans for house purchase increased as well (albeit minimally), to 4.78%. The overall decline in the APRC on loans to households was due to a rise in the share of loans for house purchase (with low rates) in the total volume of loans.

Interest rates on outstanding amounts

As in the previous four periods, the overall average interest rate on **outstanding amounts of deposits** of households recorded a slight increase in December. The rate on outstanding amounts of deposits of non-financial corporations was about the same as in the previous month.

Deposits of **households** were remunerated at an overall rate of 1.28%. This modest rate increase was due to deposits redeemable at notice (with a rate increase of 0.05 percentage point to 1.97%) and deposits with agreed maturity of up to two years (with a slight rise of 0.02 percentage point to 1.49%). By contrast, outstanding amounts of deposits with agreed maturity of over two years saw a small rate decline (of 0.04 percentage point) to 2.31%, and the rate on overnight deposits showed no major change (0.41%).

The overall average rate on outstanding amounts of deposits of **non-financial corporations** was also almost the same as in the previous month (1.18%). The interest rate on deposits with agreed maturity recorded a modest rise to 2.09%, whereas the rate on outstanding amounts of overnight deposits was lower than in the previous month (0.72%).

The overall average interest rate on **outstanding amounts of loans** to non-financial corporations charged by banks in this month was slightly lower, while that on loans to households was the same as in the previous month.

Outstanding amounts of loans to **households** bore an average rate of 6.80%. The interest rate fell slightly for all types of loans (by not more than 0.02 percentage point), reaching 4.91% on loans for house purchase and 11.30% on consumer credit and other loans.

The interest rate on outstanding amounts of loans to **non-financial corporations** saw a negligible decline in December, to 4.45%. As in the previous month, the decrease in the overall rate was mostly due to loans with maturities of up to one year (down by 0.08 percentage point to 4.23%).

Commentary on the quarterly aggregated balance sheet of collective investment funds (Table 12): September 2006

As of the end of Q3, collective investment funds (CIFs) administered assets worth CZK 74.3 billion. This means that the value of assets administered by these funds increased by CZK 2.2 billion, which represents a quarter-on-quarter growth of 3.11%. Compared to the same period of 2005, the increase was 23.93%, or CZK 14.4 billion.

The biggest rise was recorded by mixed funds, whose assets grew from CZK 25.8 billion to CZK 26.7 billion, a quarter-on-quarter increase of 3.48%. Growth was also recorded by funds of funds (from CZK 11.7 billion to CZK 12.5 billion) and equity funds (from CZK 9.6 billion to CZK 10.4 billion). By contrast, bond funds experienced a fall in assets of CZK 0.2 billion to CZK 24.7 billion, i.e. a decline of 0.9%.

The funds most frequently invested in securities other than shares, particularly those issued by the general government of the Czech Republic. The total volume of purchased securities other than shares was CZK 35 billion, accounting for 47.07% of CIF equity capital. The share of such securities in equity capital remained virtually unchanged compared to the previous quarter and dropped by 9.91 percentage points in year-on-year comparison. The biggest rise in volume compared to the previous quarter was recorded by purchased shares and other equity. Investment in shares and other equity rose by CZK 1.3 billion to CZK 22.2 billion, i.e. up by 6.26% in quarter-on-quarter terms and by CZK 6.1 billion year on year. The highest annual growth was recorded for investments in investment fund shares. The value of fund shares in CIF ownership stood at CZK 12.8 billion as of the end of Q3 and was CZK 7.5 billion higher than in the same period of 2005, representing growth of 143.25%.

At the end of Q3, a total of 67 resident collective investment funds were operating in the territory of the Czech Republic, of which 11 were equity funds, 18 were funds of funds, 12 were bond funds and 26 were mixed funds.

Commentary on the quarterly aggregated balance sheet of financial corporations engaged in lending (Table 13, 14): September 2006

As of 30 September 2006, financial corporations engaged in lending had total assets of CZK 296.6 billion. Total assets rose by CZK 3.5 billion compared to the previous quarter. This represents a quarterly increase of 1.2 %. Financial leasing companies, whose total assets amounted to CZK 214.8 billion, accounted for the largest share of total assets. Other lending companies contributed CZK 81.8 billion to the overall total assets.

The largest asset item was loans, which amounted to CZK 231.1 billion, up by CZK 3.1 billion compared to the second quarter. Short-term loans stood at CZK 66.6 billion at the end of Q3, accounting for 22.5% of total assets. Long-term loans amounted to CZK 164.5 billion, i.e. 55.5 % of total assets. The loans were provided almost entirely to residents.

The largest part of the loans provided to residents consisted of loans to non-financial corporations, which amounted to CZK 122.3 billion, i.e. 53.4% of loans to residents. Loans provided to non-financial corporations rose by CZK 1.7 billion compared to Q2, i.e. a quarterly increase of 1.4%. CZK 118.7 billion was provided by financial leasing companies and CZK 3.5 billion by other lending companies. These loans are made up predominantly of loans with a maturity of one to five years, which amounted to CZK 77.5 billion.

The second largest category of loans provided was loans to households, which totalled CZK 103 billion, up by CZK 0.9 billion. This represents a quarterly increase of 0.9%. These loans account for 45% of loans granted to residents. CZK 50.6 billion was provided by financial leasing companies and CZK 52.4 billion by other lending companies. Loans with a maturity of one to five years amounted to CZK 62.8 billion, giving them the largest share in loans to households.

¹⁾ Under Decree No. 307/2004 Coll. these are companies whose main or major business activity involves providing credit or loans or entering into agreement of similar nature, e.g. financial leasing, factoring, consumer credit, hire-purchase financing, etc. The figures mentioned only include financial leasing companies and other lending companies. Data for factoring have not yet been published.

Glossary

Harmonisation of statistics: the Treaty establishing the European Community tasked the European Central Bank (ECB) with ensuring harmonised statistics according to Article 5 of the Statute of the European System of Central Banks. The national central banks of EC Member States therefore collect statistical information according to a uniform definition, from which the ECB then compiles aggregate data for euro area monetary policy. Although Council Regulation No 2533/98, which specifies the requirements for statistical data collection, only concerns euro area countries, the ECB also receives full data sets from the non-participating countries (e.g. the Czech Republic) in order to monitor their economic and financial development.

Monetary statistics: financial macrostatistics of sectors S.121, S.122 and S.123 based exclusively on the "host country" principle. According to this principle, a resident reporting unit is an institution resident in a given economic territory. The reporting population includes 1) institutions incorporated and located in the territory, including subsidiaries of parent companies located outside that territory, and 2) branches of institutions that have their head office outside that territory.

APRC: annual percentage rate of charge, i.e. the rate including interest expenses and all related costs of the credit to the client (fees etc.).

Collective investment funds: for the purposes of monetary and banking statistics, collective investment funds comprise unit trusts and investment funds other than money market funds which are resident in the Czech Republic. These are undertakings the sole object of which is collective investment, i.e. pooling investor funds and investing them under conditions stipulated in the Act on Collective Investment (No. 189/2004 Coll.). Such undertakings may be constituted under the Act either as unit trust managed by an investment company or as investment funds.

Consolidated balance sheet of the MFI sector: the basic statistical tool of monetary statistics. It is based on the residency principle and is obtained by netting out inter-MFI positions on their aggregated balance sheet.

Consumer credit: loans granted to households for personal use in the consumption of goods and services.

Contribution to annual growth rate: the growth rate of a selected component weighted by its share in the total growth rate.

Deposits redeemable at notice: deposits that can be withdrawn by clients only after the expiry of a period of notice agreed in advance, which starts at the moment of notification of the intention to withdraw the deposit.

Deposits with agreed maturity: deposits that cannot be withdrawn by clients before a predefined maturity.

FCLs - Type of services:

1. *Financial leasing* - It is financial service, when lessee acquires the right to use good in exchange for rental payment over predetermined term. All risk and rewards of ownership are transferred from lessor to lessee. After lapse of predetermined term ownership of good is transferred from lessor to lessee.

2. *Factoring* - It is financial service consisting in purchase of short-term receivables (with maturity 30-90 days) before their maturity date. Receivables are transferred on factoring company – factor- by supplier of goods or services.

3. *Other lending* - This category encompasses granting credit or loans or agreements of similar nature different from financial leasing and factoring. It deals especially with consumer credit, hire purchase, consumption loans, etc.

Financial corporations engaged in lending (FCLs): FCLs mean corporations classified within sector S.123 other financial intermediaries which are predominantly engaged in granting credit or loans or entering into agreements of similar nature, for example financial leasing, faktoring, consumer credit, hire purchase, etc. (see Decree No. 307/2004 Coll.)

Growth rate: the percentage change in the monitored variable over the reference period, calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month.

Household sector: institutional units included in the sectors of households (S.14) and non-profit institutions serving households (S.15) under ESA 95.

Glossary (cont'd)

Housing loans: Loans granted to households for the purpose of purchasing/investing in housing, including building and home improvements.

Interest rate fixation: a period of interest rate fixation, i.e. a period at the beginning of a contract for which the agreed interest rate cannot be changed. Period up to 1 year includes floating rates.

MFI longer-term financial liabilities: comprise deposits with an agreed maturity of over two years, deposits redeemable at a period of notice of over three months, debt securities issued with an original maturity of more than two years and the capital and reserves of the Czech MFI sector.

Monetary aggregates: comprise the monetary liabilities of monetary financial institutions to non-MFI Czech residents except central government. The narrow monetary aggregate M1 includes currency in circulation (excluding cash at banks' cash desks) and overnight deposits. The intermediate monetary aggregate M2 comprises M1, deposits redeemable at a period of notice of up to and including three months and deposits with a maturity of up to and including two years. The broad monetary aggregate M3 comprises M2, money market fund shares/units, debt securities with a maturity of up to two years and repurchase agreements.

Monetary financial institutions (MFIs): financial institutions forming the money-issuing sector. Under Community law, these include the central bank, resident credit institutions, and all other resident financial institutions whose business is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credit and/or invest in securities. In the Czech Republic, MFIs include the central bank, banks, money market funds and credit unions.

Money-holding sector: all institutional units except central government (S.1311) and monetary financial institutions (S.121 and S.122) under ESA 95.

Money-issuing sector: all institutional units included in the sectors of the central bank (S.121) and other monetary financial institutions (S.122) under ESA 95.

Money-neutral sector: an institutional sector comprising the central government sector (S.1311) under ESA 95.

Money market funds: MMFs are defined as those collective investment funds of which the units are, in terms of liquidity, close substitutes for deposits and which primarily invest in money market instruments and/or in MMF shares/units and/or in other transferable debt instruments with a residual maturity of up to and including one year, and/or in bank deposits, and/or which pursue a rate of return that approaches the interest rates of money market instruments. The criteria applied in order to identify MMFs shall be derived from the public prospectus as well as fund rules, instruments of incorporation, established statutes or by-laws, subscription documents or investment contracts, marketing documents, or any other statement with similar effects, of the collective investment undertaking.

Net external assets: comprise external assets of Czech MFIs (such as monetary gold, non-koruna banknotes, securities issued by non-residents and loans granted to non-residents) minus external liabilities of the Czech MFI sector (such as non-residents' holdings of deposits, repurchase agreements, money market fund shares and units, and debt securities with a maturity of up to and including two years issued by MFIs and held by non-residents).

Non-MFIs: all resident sectors excluding MFIs, i.e. general government (S.13), non-financial corporations (S.11), financial institutions other than MFIs (S.123 and S.124) and households and non-profit institutions serving households (S.14 and S.15) under ESA 95.

Other financial intermediaries (OFIs): entities included in the sectors of other financial intermediaries except insurance corporations and pension funds (S. 123), financial auxiliaries (S.124) and insurance corporations and pensions funds (S.125) under ESA 95.

Private sector: a sector comprising all institutional sectors except general government (S.13) and monetary financial institutions (S.121 and S.122) under ESA 95.

Glossary (cont'd)

Rates on new business: interest rates agreed by the bank and the client for all agreements negotiated during the reference period.

Rates on outstanding amounts: interest rates applied to end-of-period balances.

Reclassifications: comprise any changes in the MFI balance sheet resulting from changes in the reporting population, corporate restructuring, reclassifications of assets and liabilities, and corrections of reported errors.

Residents: all domestic and foreign legal entities and natural persons, including branches of foreign banks and foreign owners of buildings and land, whose centre of economic interest is in the given territory. Foreign legal entities and natural persons are considered residents after at least one year of economic activity in the territory, with the exception of foreign bank branches and owners of buildings and land, who become residents at the moment they perform a valid legal act (in the case of foreign owners of buildings and land, this only applies in connection with transactions relating to the building or land in question).

Transaction (flow) data: values related to the whole period which are calculated as the difference between the balances at the end of the current and the previous period adjusted for non-transaction effects, i.e. effects connected with reclassifications, valuation changes and exchange rate variations over the period. These factors result in breaks in time series, thereby affecting the comparability of end-of-period balances. Transaction (flow) data only reflect those changes that arise from transactions, i.e. from accepting financial assets or providing financial liabilities.

Unit trusts other than money market funds:

1. *equity funds and funds of funds* – funds that constantly invest 66% or more of their assets on the equity market (i.e. in shares and instruments bearing equity risk) and/or funds that constantly invest 66% or more of their assets in the units and shares of other unit trusts/investment funds. Equity funds also include index funds and guaranteed funds linked to stock indices.
2. *bond funds* – funds that constantly invest on the bond market. Additional investment in equities is allowed, but the share of equities must not exceed 10% of the fund's assets. Bond funds also include index funds and guaranteed funds linked to bond indices.
3. *mixed funds* – funds that invest in various assets (equities and bonds) on various markets and do not have limits on the share of equities or bonds.

Technical Notes

A. Calculation of growth rates

The growth rate for the reference period is calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month. Monthly transactions are calculated from differences in outstanding amounts adjusted for reclassifications, other revaluations, exchange rate variations and other changes which do not arise from transactions. This data thus reflects only those changes that arise from accepting financial assets or providing financial liabilities. Reclassifications and other non-transaction corrections are introduced into the transaction statistics to preserve the comparability of the gradual monitoring results, thereby enabling calculation of the indices of expected outstanding balances of the monitored variables and determination of their growth rates.

Method of calculation

1. The month-on-month percentage change a_t^M for month t is calculated as:

$$(a) \quad a_t^M = \left(\frac{F_t^M}{L_{t-1}} \right) \times 100$$

2. The annual growth rate for month t , i.e. the change for the last 12 months ending with month t , is calculated as the product of the twelve coefficients for each previous month. The calculation of the annual growth rate from the month-on-month growth rates thus enables transaction changes and non-transaction effects in the individual months to be taken into account.

$$(b) \quad a_t = \left[\prod_{i=0}^{11} \left(1 + \frac{F_{t-i}^M}{L_{t-1-i}} \right) - 1 \right] \times 100$$

where

F_t^M - transactions in month t

$F_t^M = (L_t - L_{t-1}) - C_t^M - E_t^M - V_t^M$

and

L_t - outstanding amount at the end of month t

C_t^M - reclassifications in month t

E_t^M - exchange rate variations in month t

V_t^M - valuation changes in month t

Growth rates for other reference periods are derived from formula (b).

B. Calculation of the contribution to the annual growth rate of a monitored variable (e.g. M3)

If $a_t(M3)$ represents the annual growth rate of M3 for the year ending with month t , and $F_{t-i}(M1)$, $F_{t-i}(M2-M1)$, $F_{t-i}(M3-M2)$ are the monthly transactions of the components M1, M2-M1 and M3-M2 in month $t-i$, the contribution of M1 to the annual growth rate of M3, for example, is calculated as:

$$\frac{\sum_{i=0}^{11} F_{t-i}(M1)}{\sum_{i=0}^{11} [F_{t-i}(M1) + F_{t-i}(M2-M1) + F_{t-i}(M3-M2)]} \times a_t(M3)$$
