Financial markets interest rates in CR (%)

COMMENTARY ON KEY INTEREST RATES (TABLE 1) AND FINANCIAL MARKET INTEREST RATES (TABLE 2): MARCH 2013

Key interest rates

The CNB's 2W repo rate has remained at 0.05% since early November 2012 and the ECB's key interest rate has been 0.75% since July 2012. The differential between the key interest rates of the CNB and the ECB was 0.7 percentage point as of 6 May 2013. This differential has remained unchanged for more than six consecutive months, and the same is true of the differential between the Lombard rates of the ECB and the CNB. The ECB's rate is 1.25 percentage points higher than that of the CNB.

Financial market interest rates

As in February, interest rates on the Czech interbank deposit market were almost unchanged in March. Interest rates in the euro area recorded a similar trend. The 1M PRIBOR, 3M PRIBOR and 6M PRIBOR rates fell only very slightly in March 2013, by 0.01 to 0.03 percentage point. The 1Y PRIBOR declined from 0.83% in February to 0.78% in March. The largest change in EURIBOR rates – of 0.06 percentage point – was recorded for the 1Y EURIBOR. This rate decreased from 0.60% to 0.54%.

On the Czech capital market, the 3Y and 10Y government bond yields were flat at the previous month's levels in March. The 3Y bond yield stood at 0.84% and the 5Y bond yield stayed at 0.59%. The yield on the 10Y bond edged down by 0.03 percentage point to 1.98% (from 2.01% in February). Government bond yields in the euro area changed for all the maturities under review. The yield on the 5Y bond saw the biggest decrease, from 2.04% in February to 1.91% in March. The 5Y bond yield is 1.32 percentage points higher than in the Czech Republic, which is the most pronounced difference among the monitored indicators. The yield on the euro area 10Y bond, by contrast, rose by 0.17 percentage point to 3.03%.

¹⁾ Monetary aggregates comprise monetary liabilities of MFIs vis-à-vis non-MFI Czech residents excluding central government. M1 is the sum of currency in circulation and overnight deposits; M2 is the sum of M1, deposits with an agreed maturity of up to two years and deposits redeemable at notice of up to three months; and M3 is the sum of M2, repurchase agreements, money market fund shares/units and debt securities up to two years.

²⁾ Including all resident sectors without general government (S.13) and MFIs sector (S.121 and S.122).

³⁾ Net foreign assets (NFA) represent balance of financial claims and liabilities of the MFI sector vis-a-vis nonresidents.

⁴⁾ Net value of flow data calculated by adjusting the difference between end-of-period levels for the effect of non-transactions-related factors.

COMMENTARY ON MONETARY DEVELOPMENTS STATISTICS¹⁾ (TABLES 3-9): MARCH 2013

The evolution of the annual rate of growth of M3 had been characterised by oscillations around zero since the start of 2010 and in the first half of 2011. It started to grow slightly in July 2011 and has moved around 5% since March 2012. In March 2013, the annual rate of growth of M3 reached 4.9%.

As a result of financial transactions, M3 rose by CZK 1.1 billion month on month (and by CZK 139.3 billion year on year), reaching CZK 2,991.3 billion.

Main components of M3

The increase in the annual rate of growth of M3 from 4.7% in February to 4.9% in March was due to a rise in the contribution of overnight deposits from 5.7 percentage points in February to 6.0 percentage point in March. The evolution of overnight deposits led to an increase in the contribution of M1 (from 6.1 percentage points in February to 6.4 percentage points in March). (Table 7)

The rise in the annual growth rate of overnight deposits from 9.0% in February to 9.6% in March reflected also in an increase in the annual growth rate of M1 to 8.5% in March (from 7.9% in February). In month-on-month terms, overnight deposits dropped by 0.4% (i.e. CZK 8.1 billion), owing to financial transactions. Overnight deposits declined in almost all economic sectors. The biggest fall was recorded for deposits of insurance corporations and pension funds (down by 22.4%, or CZK 5.2 billion). Decreases were also recorded for deposits of non-financial corporations (down by 1.3%, or CZK 7.4 billion), other financial intermediaries (down by 1.2%, or CZK 0.5 billion) and other government (down by 1.1%, or CZK 1.7 billion). By contrast, deposits of households increased by 0.6%, or CZK 6.7 billion.

The annual rate of growth of currency in circulation rose from 2.6% in February to 3.3% in March. In month-on-month terms, currency in circulation rose by 0.9%, standing at CZK 391.6 billion.

Other short-term deposits (excluding overnight deposits) grew by 0.7% (CZK 4.4 billion) month on month, owing to financial transactions. The annual rate of growth of these deposits decreased from -7.8% in February to -8.5% in March. The annual growth rate of deposits with maturity of up to two years fell by 1.7 percentage points compared to the previous month, reaching -19.6%. The annual rate of growth of deposits redeemable at notice of up to 3 months edged up from 4.2% in February to 5.1% in March. Turning to other short-term deposits, increases were recorded for deposits of other financial intermediaries (up by 10.2%, or CZK 2.7 billion), insurance corporations and pension funds (up by 2.3%, or CZK 0.7 billion) and households (up by 0.5%, or CZK 2.3 billion). By contrast, deposits of other government and non-financial corporations decreased (by 4.2%, or CZK 0.7 billion and by 0.5%, or CZK 0.5 billion respectively).

Marketable instruments, which consist of repos, money market fund shares/units and debt securities with maturities of up to two years, rose by 5.2% month on month, due to financial transactions. The annual rate of growth of marketable instruments increased by 2.3 percentage points to 99.1% (96.8% in February).

Main counterparts of M3

The annual rate of growth of loans to the private sector, which are the most important counterpart of M3, stood at 3.5% in March. Following a stagnation in the major components of this indicator, i.e. the annual growth rate of loans to households and the annual growth rate of loans to non-financial corporations, observed since the first half of 2011, a decline in the values of annual growth rates of these components has been recorded in recent months. The period under review, which saw a modest increase, was an exception. The annual growth rate of loans to households was 4.2% in March 2013 (6.2% in March 2012). The annual growth rate of loans to non-financial corporations was 2.7% in March 2013 (6.0% in March 2012).

The annual growth rate of loans provided to general government and purchased securities was 8.6% in March (10.7% in February).

The annual growth rate of net external assets rose to 11.4% at the end of March (from 11.1% in February). The annual growth rate of longer-term financial liabilities fell from 7.0% in February to 5.8% in March. The annual growth rate of deposits of central government dropped to 20.6% in March (from 23.1% in February).

¹⁾ All increases and decreases referred to in this commentary relate only to financial transactions adjusted for non-transaction effects.

¹⁾ The interest rates applied by MFIs to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. New business refers to any new agreement between the customer and the MFI within given period.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15) according to the classification ESA95.

³⁾ For this instrument category the new business are equal to the outstanding amounts (end-of-period stocks).

⁴⁾ Households deposits redeemable at notice include similar deposits of non-financial corporations of which volumes are negligible in this category.

⁵⁾ Since 2009, the amendment to Act No. 190/2004 Coll., on Bonds, as amended, has been fully applied, under which a mortgage loan is a loan whose redemption, including appurtenances (i.e. interest etc.), is secured by lien (right of pledge) over real estate (property), including property under construction, where the claim arising from the loan does not exceed twice the pledge value of the mortgaged property (Article 28(3)).

⁶⁾ Debit balances on current accounts. The total amount owed by the borrower is included, irrespective of whether is within or beyond any limit agreed beforehand.

⁷⁾ The initial period of fixations is a predetermined period of time at the start of the contract during which the value of the interest rate cannot change. Period up to 3 months includes floating rates.

⁸⁾ Annual percentage rate of charge (APRC) covers total costs of the credit to the client including charges etc.

COMMENTARY ON MFI INTEREST RATES (TABLES 10 AND 11) – MARCH 2013**Interest rates on new business**

In March, interest rates on new deposits of households and non-financial corporations saw a significant change for deposits with agreed maturity.

The interest rate on overnight deposits of households edged down to 0.61%. The rate on deposits with agreed maturity decreased from the previous month (to 1.50%). The rate on deposits redeemable at notice was unchanged at 2.02%.

The interest rate on overnight deposits of non-financial corporations was flat at 0.29%. Deposits with agreed maturity of up to one year (which as a rule account for 100% of all deposits with agreed maturity in the case of this sector) were remunerated at a lower rate (0.29%).

Within interest rates on new loans to households, consumer credit recorded a significant change in March. Interest rates on loans to non-financial corporations saw a marked change for loans of over CZK 7.5 million and up to CZK 30 million.

The overall interest rate on consumer credit, loans for house purchase and other loans fell by 0.33 percentage point to 6.26%. The interest rate on consumer credit decreased by 0.23 percentage point to 14.89% and that on loans for house purchase declined by 0.12 percentage point to 3.54%. The rate on other loans was 0.17 percentage point lower, standing at 4.71%. The rate on overdrafts and revolving loans rose by 0.11 percentage point to 14.80%.

Interest rates on new loans to non-financial corporations (excluding overdrafts, revolving loans and credit cards) picked up slightly by 0.03 percentage point to 1.99%. The rate on loans of up to CZK 7.5 million edged down by 0.02 percentage point to 4.44%. The rate on loans of over CZK 7.5 million and up to CZK 30 million decreased by 0.12 percentage point from a month earlier, standing at 2.48%. The interest rate on new loans of over CZK 30 million was flat at 1.76%.

Interest rates on outstanding amounts

The average interest rate on outstanding amounts of deposits of households and non-financial corporations remained broadly unchanged in March.

Total deposits of households were remunerated at 1.08%. The rate on overnight deposits fell slightly to 0.61%, the rate on deposits redeemable at notice stayed at 2.02% and the rate on deposits with agreed maturity was also the same as in the previous month, at 1.83%.

The rate on total deposits of non-financial corporations was slightly lower than in the previous month (0.45%). The interest rate on overnight deposits remained unchanged at 0.29% and the interest rate on deposits with agreed maturity decreased by 0.02 percentage point to 1.17%.

Similarly, the average interest rates on outstanding amounts of loans to households recorded only a minor change. Interest rates on outstanding amounts of loans to non-financial corporations saw the biggest change for loans with maturity of over one year and up to five years.

The overall interest rate on loans to households fell by 0.04 percentage point to 6.18%. The rate on loans for house purchase also decreased marginally to 4.47%, while consumer credit and other loans were remunerated at 10.85%.

The average interest rate on outstanding amounts of loans to non-financial corporations dropped slightly to 3.25% in March. The rate on loans with maturity of up to one year rose by 0.03 percentage point to 2.76%. The interest rate on loans with maturity of over one year and up to five years dropped by 0.04 percentage point to 3.31%. The rate on loans with maturity of over five years also decreased slightly, by 0.03 percentage point to 3.53%.

COMMENTARY ON THE AGGREGATED BALANCE SHEET OF COLLECTIVE INVESTMENT FUNDS (TABLE 12): FEBRUARY 2013

Net assets value: The net assets value of collective investment funds (CFIs) was CZK 183.8 billion at the end of February. This means an increase of CZK 1.4 billion compared to January (monthly transactions accounted for CZK +1.3 billion). Compared to the same period last year, the net assets value rose by CZK 31.6 billion. The biggest month-on-month change in the net assets value was recorded for bond funds, up by CZK 0.8 billion to CZK 88.6 billion.

Investment in bonds: The value of bond holdings was CZK 76.5 billion at the end of February. Compared to the previous month, the total volume of bonds rose by CZK 0.6 billion (monthly transactions accounted for CZK +0.3 billion). The proportion of securities other than shares in the funds' net assets value was 41.6%.

Investment in equity securities: The volume of equity securities in the funds' portfolio increased in February. As of the end of the month, the value of holdings of equity securities amounted to CZK 47.8 billion, of which CZK 20.1 billion was investment in collective investment funds (including money market funds) and CZK 27.7 billion was investment in shares and other equity. The value of equity securities picked up by CZK 0.6 billion compared to January (monthly transactions accounted for CZK +0.3 billion). The share of equity securities in the funds' net assets value increased to 26.0% in February.

Other investment: The value of funds invested in other assets decreased in the period under review. The volume of other investment was CZK 87.8 billion in February (monthly transactions accounted for CZK +0.2 billion), of which CZK 48.0 billion was fixed investment and CZK 30.7 billion investment in deposits. The proportion of other investment in the funds' net assets value showed a month-on-month decline, from 48.2% to 47.8%.

Reporting population: At the end of February 2013, a total of 230 resident collective investment funds were active in the Czech Republic, of which 26 were equity funds, 52 bond funds, 54 mixed funds, 86 real estate funds and 12 other funds. Two new collective investment funds were established during the period under review.

COMMENTARY ON THE AGGREGATED BALANCE SHEET OF FINANCIAL CORPORATIONS ENGAGED IN LENDING (TABLES 13 AND 14): DECEMBER 2012

Financial corporations engaged in lending had total assets of CZK 349.7 billion as of 31 December 2012, up by CZK 1.4 billion in quarter-on-quarter terms. Compared to the same period a year earlier, total assets fell by CZK 6.4 billion.

The largest asset item was loans provided, which amounted to CZK 256.7 billion, of which CZK 250.9 billion was provided to residents. Total loans provided rose by CZK 2.1 billion (i.e. 0.8%) in 2012 Q4. In year-on-year terms, loans fell by 3.6% (CZK 9.6 billion).

The largest part of loans provided to residents consisted of loans to non-financial corporations, which amounted to CZK 171.9 billion, i.e. 68.5% of loans to residents. Loans provided to non-financial corporations were up by CZK 2.7 billion compared to the previous quarter. They recorded a year-on-year decrease of CZK 5.5 billion (3.1%).

The second largest category of loans to residents consisted of loans to households, totalling CZK 78.2 billion. They were down by CZK 0.5 billion compared to the previous quarter. In year-on-year terms, loans provided to households fell by CZK 4.0 billion, i.e. 4.9%. Loans to households account for 31.2% of loans granted to residents.

GLOSSARY

Harmonisation of statistics: the Treaty establishing the European Community tasked the European Central Bank (ECB) with ensuring harmonised statistics according to Article 5 of the Statute of the European System of Central Banks. The national central banks of EC Member States therefore collect statistical information according to a uniform definition, from which the ECB then compiles aggregate data for euro area monetary policy. Although Council Regulation No 2533/98, which specifies the requirements for statistical data collection, only concerns euro area countries, the ECB also receives full data sets from the non-participating countries (e.g. the Czech Republic) in order to monitor their economic and financial development.

Monetary statistics: financial macrostatistics of sectors S.121, S.122 and S.123 based exclusively on the “host country” principle. According to this principle, a resident reporting unit is an institution resident in a given economic territory. The reporting population includes 1) institutions incorporated and located in the territory, including subsidiaries of parent companies located outside that territory, and 2) branches of institutions that have their head office outside that territory.

APRC: annual percentage rate of charge, i.e. the rate including interest expenses and all related costs of the credit to the client (fees etc.).

Collective investment funds: for the purposes of monetary and banking statistics, collective investment funds comprise unit trusts and investment funds other than money market funds which are resident in the Czech Republic. These are undertakings the sole object of which is collective investment, i.e. pooling investor funds and investing them under conditions stipulated in the Act on Collective Investment (No. 189/2004 Coll.). Such undertakings may be constituted under the Act either as unit trust managed by an investment company or as investment funds.

Consolidated balance sheet of the MFI sector: the basic statistical tool of monetary statistics. It is based on the residency principle and is obtained by netting out inter-MFI positions on their aggregated balance sheet.

Consumer credit: loans granted to households for personal use in the consumption of goods and services.

Contribution to annual growth rate: the growth rate of a selected component weighted by its share in the total growth rate.

Deposits redeemable at notice: deposits that can be withdrawn by clients only after the expiry of a period of notice agreed in advance, which starts at the moment of notification of the intention to withdraw the deposit.

Deposits with agreed maturity: deposits that cannot be withdrawn by clients before a predefined maturity.

Financial corporations engaged in lending (FCLs):

Definition: FCLs mean corporations classified within sector S.123 other financial intermediaries which are predominantly engaged in granting credit or loans or entering into agreements of similar nature, for example financial leasing, factoring, consumer credit, hire purchase, etc. (see Decree No. 307/2004 Coll.)

Type of services:

1. Financial leasing - It is financial service, when lessee acquires the right to use good in exchange for rental payment over predetermined term. All risk and rewards of ownership are transferred from lessor to lessee. After lapse of predetermined term ownership of good is transferred from lessor to lessee.

2. Factoring - It is financial service consisting in purchase of short-term receivables (with maturity 30-90 days) before their maturity date. Receivables are transferred on factoring company – factor- by supplier of goods or services.

3. Other lending - This category encompasses granting credit or loans or agreements of similar nature different from financial leasing and factoring. It deals especially with consumer credit, hire purchase, consumption loans, etc.

Growth rate: the percentage change in the monitored variable over the reference period, calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month.

Household sector: institutional units included in the sectors of households (S.14) and non-profit institutions serving households (S.15) under ESA 95.

Housing loans: Loans granted to households for the purpose of purchasing/investing in housing, including building and home improvements.

Interest rate fixation: a period of interest rate fixation, i.e. a period at the beginning of a contract for which the agreed interest rate cannot be changed. Period up to 1 year includes floating rates.

MFI longer-term financial liabilities: comprise deposits with an agreed maturity of over two years, deposits redeemable at a period of notice of over three months, debt securities issued with an original maturity of more than two years and the capital and reserves of the Czech MFI sector.

Monetary aggregates: comprise the monetary liabilities of monetary financial institutions to non-MFI Czech residents except central government. The narrow monetary aggregate M1 includes currency in circulation (excluding cash at banks' cash desks) and overnight deposits. The intermediate monetary aggregate M2 comprises M1, deposits redeemable at a period of notice of up to and including three months and deposits with a maturity of up to and including two years. The broad monetary aggregate M3 comprises M2, money market fund shares/units, debt securities with a maturity of up to two years and repurchase agreements.

Monetary financial institutions (MFIs): financial institutions forming the money-issuing sector. Under Community law, these include the central bank, resident credit institutions, and all other resident financial institutions whose business is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credit and/or invest in securities. In the Czech Republic, MFIs include the central bank, banks, money market funds and credit unions.

Money-holding sector: all residents institutional units except central government (S.1311) and monetary financial institutions (S.121 and S.122) under ESA 95.

Money-issuing sector: all institutional units included in the sectors of the central bank (S.121) and other monetary financial institutions (S.122) under ESA 95.

Money-neutral sector: an institutional sector comprising the central government sector (S.1311) under ESA 95.

Money market funds: collective investment undertakings complying with all the following criteria shall be treated as MMFs, where they:

- (a) pursue the investment objective of maintaining a fund's principal and providing a return in line with the interest rates of money market instruments;
- (b) invest in money market instruments which comply with the criteria for money market instruments set out in Directive 2009/65/EC of the European Parliament and of the Council of 13 July 2009 on the coordination of laws, regulations and administrative provisions relating to undertakings for collective investment in transferable securities (UCITS) (*), or deposits with credit institutions or, alternatively,

- ensure that the liquidity and valuation of the portfolio in which they invest is assessed on an equivalent basis;
- (c) ensure that the money market instruments they invest in are of high quality, as determined by the management company. The quality of a money market instrument shall be considered, inter alia, on the basis of the following factors:
- the credit quality of the money market instrument,
 - the nature of the asset class represented by the money market instrument,
 - for structured financial instruments, the operational and counterparty risk inherent within the structured financial transaction,
 - the liquidity profile;
- (d) ensure that their portfolio has a weighted average maturity (WAM) of no more than 6 months and a weighted average life (WAL) of no more than 12 months, when
- 'weighted average maturity' (WAM) shall mean a measure of the average length of time to maturity of all of the underlying securities in the fund weighted to reflect the relative holdings in each instrument, assuming that the maturity of a floating rate instrument is the time remaining until the next interest rate reset to the money market rate, rather than the time remaining before the principal value of the security must be repaid. In practice, WAM is used to measure the sensitivity of a MMF to changing money market interest rates;
 - 'weighted average life' (WAL) shall mean the weighted average of the remaining maturity of each security held in a fund, meaning the time until the principal is repaid in full, disregarding interest and not discounting. Contrary to the calculation of the WAM, the calculation of the WAL for floating rate securities and structured financial instruments does not permit the use of interest rate reset dates and instead only uses a security's stated final maturity. WAL is used to measure the credit risk, as the longer the reimbursement of principal is postponed, the higher the credit risk. WAL is also used to limit the liquidity risk;
- (e) provide daily net asset value (NAV) and a price calculation of their shares/units, and daily subscription and redemption of shares/units;
- (f) limit investment in securities to those with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days whereby floating rate securities should reset to a money market rate or index;
- (g) limit investment in other collective investment undertakings to those complying with the definition of MMFs;
- (h) do not take direct or indirect exposure to equity or commodities, including via derivatives and only use derivatives in line with the money market investment strategy of the fund. Derivatives which give exposure to foreign exchange may only be used for hedging purposes. Investment in non-base currency securities is allowed provided the currency exposure is fully hedged;
- (i) have either a constant or fluctuating NAV

Net external assets: comprise external assets of Czech MFIs (such as monetary gold, non-koruna banknotes, securities issued by non-residents and loans granted to non-residents) minus external liabilities of the Czech MFI sector (such as non-residents' holdings of deposits, repurchase agreements, money market fund shares and units, and debt securities with a maturity of up to and including two years issued by MFIs and held by non-residents).

Non-MFIs: all resident sectors excluding MFIs, i.e. general government (S.13), non-financial corporations (S.11), financial institutions other than MFIs (S.123, S.124 and S.125) and households and non-profit institutions serving households (S.14 and S.15) under ESA 95.

Other financial intermediaries (OFIs): entities included in the sectors of other financial intermediaries except insurance corporations and pension funds (S. 123), financial auxiliaries (S.124) and insurance corporations and pensions funds (S.125) under ESA 95.

Private sector: a sector comprising all institutional sectors except general government (S.13) and monetary financial institutions (S.121 and S.122) under ESA 95.

Rates on new business: interest rates agreed by the bank and the client for all agreements negotiated during the reference period.

Rates on outstanding amounts: interest rates applied to end-of-period balances.

Reclassifications: comprise any changes in the MFI balance sheet resulting from changes in the reporting population, corporate restructuring, reclassifications of assets and liabilities, and corrections of reported errors.

Residents: all domestic and foreign legal entities and natural persons, including branches of foreign banks and foreign owners of buildings and land, whose centre of economic interest is in the given territory. Foreign legal entities and natural persons are considered residents after at least one year of economic activity in the territory, with the exception of foreign bank branches and owners of buildings and land, who become residents at the moment they perform a valid legal act (in the case of foreign owners of buildings and land, this only applies in connection with transactions relating to the building or land in question).

Transaction (flow) data: values related to the whole period which are calculated as the difference between the balances at the end of the current and the previous period adjusted for non-transaction effects, i.e. effects connected with reclassifications, valuation changes and exchange rate variations over the period. These factors result in breaks in time series, thereby affecting the comparability of end-of-period balances. Transaction (flow) data only reflect those changes that arise from transactions, i.e. from accepting financial assets or providing financial liabilities.

Unit trusts other than money market funds:

1. Equity funds – funds investing mainly in shares and other equity.
2. Bond funds – funds investing mainly in securities other than shares.
3. Mixed funds – funds investing in equity and debt securities without a clear preference for either approach.
4. Real estate funds – funds investing mainly in real estate.
5. Hedge funds – funds applying more or less unlimited investment strategies in order to achieve positive absolute yields, whose managers are remunerated based on the fund's performance in addition to their salary.
6. Other funds – collective investment funds other than equity funds, bond funds, mixed funds, real estate funds or hedge funds.

Funds of funds and funds of qualified investors are classified under the aforementioned categories according to their investment strategies.

TECHNICAL NOTES

A. Calculation of growth rates

The growth rate for the reference period is calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month. Monthly transactions are calculated from differences in outstanding amounts adjusted for reclassifications, other revaluations, exchange rate variations and other changes which do not arise from transactions. This data thus reflects only those changes that arise from accepting financial assets or providing financial liabilities. Reclassifications and other non-transaction corrections are introduced into the transaction statistics to preserve the comparability of the gradual monitoring results, thereby enabling calculation of the indices of expected outstanding balances of the monitored variables and determination of their growth rates.

Method of calculation

1. The month-on-month percentage change a_t^M for month t is calculated as:

$$(a) \quad a_t^M = \left(\frac{F_t^M}{L_{t-1}} \right) \times 100$$

2. The annual growth rate for month t , i.e. the change for the last 12 months ending with month t , is calculated as the product of the twelve coefficients for each previous month. The calculation of the annual growth rate from the month-on-month growth rates thus enables transaction changes and non-transaction effects in the individual months to be taken into account.

$$(b) \quad a_t = \left[\prod_{i=0}^{11} \left(1 + \frac{F_{t-i}^M}{L_{t-1-i}} \right) - 1 \right] \times 100,$$

where

F_t^M - transactions in month t

$F_t^M = (L_t - L_{t-1}) - C_t^M - E_t^M - V_t^M$

and

L_t - outstanding amount at the end of month t

C_t^M - reclassifications in month t

E_t^M - exchange rate variations in month t

V_t^M - valuation changes in month t

Growth rates for other reference periods are derived from formula (b).

B. Calculation of the contribution to the annual growth rate of a monitored variable (e.g. M3)

If $a_t(M3)$ represents the annual growth rate of M3 for the year ending with month t , and $F_{t-i}(M1)$, $F_{t-i}(M2-M1)$, $F_{t-i}(M3-M2)$ are the monthly transactions of the components M1, M2-M1 and M3-M2 in month $t-i$, the contribution of M1 to the annual growth rate of M3, for example, is calculated as:

$$\frac{\sum_{i=0}^{11} F_{t-i}(M1)}{\sum_{i=0}^{11} [F_{t-i}(M1) + F_{t-i}(M2-M1) + F_{t-i}(M3-M2)]} \times a_t(M3)$$
