Financial market interest rates in CZ (%)

COMMENTARY ON KEY INTEREST RATES (TABLE 1) AND FINANCIAL MARKET INTEREST RATES (TABLE 2): SEPTEMBER 2017

Key interest rates

With effect from 4 August 2017, the 2W repo rate of the Czech National Bank (CNB) changed for the first time in more than four years, increasing by 0.20 percentage point to 0.25%. The key interest rate of the European Central Bank (ECB) has been zero since March 2016. The ECB's Lombard rate fell by 0.05 percentage point (to 0.25%) as of the same date as the ECB's key rate. The CNB's Lombard rate also changed in early August 2017 (an increase to 0.50%). The ECB's discount rate decreased to a historical low of -0.40% in March 2016, down by 0.10 percentage point from the level of -0.30% where it had stood since December 2015.

Financial market interest rates

All interest rates on the Czech interbank deposit market rose slightly in September. The 1M PRIBOR, the 3M PRIBOR and the 6M PRIBOR all picked up by 0.03 percentage point, reaching 0.37%, 0.46% and 0.52% respectively. The 1Y PRIBOR recorded the largest increase, up by 0.04 percentage point. It stood at 0.64% in September.

All the monitored interest rates on the Czech capital market increased. The yield on the 2Y Czech bond rose by 0.04 percentage point to -0.29%. The yield on the 5Y bond edged up by 0.01 percentage point to 0.10%. The yield on the 10Y bond increased from 0.83% in August to 0.97% in September. The yield on the 2Y euro area bond fell by 0.01 percentage point to -0.43%. The yield on the 5Y euro area bond dropped by 0.05 percentage point. It stood at 0.13% in September. The yield on the 10Y bond increased by 0.08 percentage point to 1.12%. The largest differential between Czech and euro area bonds was recorded for the 10Y bond yields, which represent one of the five Maastricht criteria. This differential reached 0.15 percentage point.

¹⁾ Monetary aggregates comprise monetary liabilities of MFIs vis-à-vis non-MFI Czech residents excluding central government. M1 is the sum of currency in circulation and overnight deposits; M2 is the sum of M1, deposits with an agreed maturity of up to two years and deposits redeemable at notice of up to three months; and M3 is the sum of M2, repurchase agreements, money market fund shares/units and debt securities up to two years.

²⁾ Including all resident sectors without general government (S.13) and MFIs sector (S.121, S.122 and S.123 according to ESA2010).

³⁾ Net foreign assets (NFA) represent balance of financial claims and liabilities of the MFI sector vis-à-vis nonresidents.

⁴⁾ Net value of flow data calculated by adjusting the difference between end-of-period levels for the effect of non-transactions-related factors.

COMMENTARY ON MONETARY DEVELOPMENTS STATISTICS¹⁾ (TABLES 3-9): SEPTEMBER 2017

The evolution of the annual rate of growth of M3 was characterised by fluctuations around 5% in 2013 and 2014. The upward trend observed from the end of 2015 Q1 until November 2015 halted in December and the annual growth rate declined to 8.2% (from 9.6% in November 2015). It stood again above 9% in the following eight months of 2016. The last four months of 2016 saw a decline from 8.7% in September to 6.7% in December. An upward trend returned in January 2017, and the annual rate of growth reached 12.7% in September 2017 (13.1% in August).

As a result of financial transactions, M3 rose by CZK 5.5 billion month on month (and by CZK 480.9 billion year on year), reaching CZK 4,238.8 billion.

Main components of M3

The decline in the annual growth rate of M3 from 13.1% in August to 12.7% in September was due to a lower contribution of other short-term deposits, down from -0.3 percentage point in August to -0.5 percentage point in September, and a decrease in the contribution of short-term marketable instruments from 2.6 percentage points in August to 2.5 percentage points in September. (Table 7)

The increase in the annual growth rate of overnight deposits from 12.8% in August to 12.9% in September was not reflected in the annual growth rate of M1, which remained unchanged from August at 12.1%. Overnight deposits increased by 0.4% (or CZK 11.5 billion) month on month, due to financial transactions. Within overnight deposits, the largest increase was recorded for deposits of other government (up by 4.3%, or CZK 9.8 billion). Increases were also recorded by the other financial intermediaries sector (up by 0.8%, or CZK 0.8 billion) and household deposits (up by 0.7%, or CZK 13 billion). By contrast, deposits of insurance corporations and pension funds and deposits of non-financial corporations declined (by 1.3%, or CZK 0.5 billion, and by 1.2%, or CZK 11.6 billion respectively).

Currency in circulation increased by 1.0% month on month, amounting to CZK 535.0 billion (CZK 529.8 billion in August).

Other short-term deposits (excluding overnight deposits) fell by 2.3% (CZK 9.4 billion) month on month, due to financial transactions. The annual rate of growth of these deposits fell to -4.5% (-2.4% in August). The annual rate of growth of deposits with agreed maturity of up to two years decreased by 5.6 percentage points compared to the previous month, reaching 0.4%. The annual growth rate of deposits redeemable at notice of up to 3 months rose to -8.7% (-9.3% in August). As regards other short-term deposits, the largest increase was recorded for deposits of insurance corporations and pension funds (up by 2.5%, or CZK 0.8 billion). By contrast, deposits of other government recorded a decline (down by 11.4%, or CZK 1.9 billion), as did deposits of other financial intermediaries (down by 5.9%, or CZK 2.9 billion), deposits of non-financial corporations (up by 5.2%, or CZK 2.8 billion) and deposits of households (down by 1.1%, or CZK 2.6 billion).

Marketable instruments, which consist of repos, money market fund shares/units and debt securities with maturities of up to two years, decreased by CZK 1.7 billion month on month due to financial transactions, to CZK 110.8 billion.

Main counterparts of M3

The annual rate of growth of loans to the private sector, which are the most important counterpart of M3, stood at 9.2% in September 2017 (10.2% in August 2017). The annual growth rate of loans to non-financial corporations, a major component of this indicator, saw a gradual increase from early 2015, from 1.3% in January 2015 to 11.8% in September 2015. Following a decline in 2015 Q4, to 6.2% in December, it was irregularly volatile, standing at 5.3% in September 2017 (6.9% in August 2017). The annual growth rate of loans to households, another major component, has been gradually growing since January 2015 (4.5% in December 2014), amounting to 8.5% in September 2017.

The annual growth rate of loans provided to general government and purchased securities rose from -24.1% in August to -21.7% in September. The annual growth rate of net external assets fell to 22.4% at the end of September (from 33.9% in August). The annual rate of growth of longer-term financial liabilities increased from 4.8% in August to 5.6% in September. The annual growth rate of deposits of central government decreased to 3.2% in September (from 71.6% in August).

¹⁾ All increases and decreases referred to in this commentary relate only to financial transactions adjusted for non transaction effects.

¹⁾ The interest rates applied by MFIs to CZK-denominated deposits and loans vis-à-vis households and non-financial corporations resident in the Czech Republic. New business refers to any new agreement between the customer and the MFI within given period.

²⁾ Including households (S.14) and non-profit institutions serving households (S.15) according to the classification ESA2010.

³⁾ For this instrument category the new business are equal to the outstanding amounts (end-of-period stocks).

⁴⁾ Households deposits redeemable at notice include similar deposits of non-financial corporations of which volumes are negligible in this category.

⁵⁾ Since 2009, the amendment to Act No. 190/2004 Coll., on Bonds, as amended, has been fully applied, under which a mortgage loan is a loan whose redemption, including appurtenances (i.e. interest etc.), is secured by lien (right of pledge) over real estate (property), including property under construction, where the claim arising from the loan does not exceed twice the pledge value of the mortgaged property (Article 28(3)).

⁶⁾ Debit balances on current accounts. The total amount owed by the borrower is included, irrespective of whether is within or beyond any limit agreed beforehand.

⁷⁾ The initial period of fixations is a predetermined period of time at the start of the contract during which the value of the interest rate cannot change. Period up to 3 months includes floating rates.

⁸⁾ Annual percentage rate of charge (APRC) covers total costs of the credit to the client including charges etc.

COMMENTARY ON MFI INTEREST RATES (TABLES 10 AND 11) – SEPTEMBER 2017**Interest rates on new business**

In September, interest rates on new deposits recorded the largest change for household deposits with agreed maturity. The interest rate on overnight deposits of households has been flat at 0.10% since May. The rate on current account deposits remained at the lowest level since the start of the measurement (0.04%) for the fifth consecutive month. The rate on deposits with agreed maturity increased by 0.09 percentage point to 0.41% and the rate on deposits redeemable at notice was unchanged from August at 1.06% (this rate is the only one to include, in addition to the household sector, also similar deposits of non-financial corporations, whose volumes are negligible in this category).

The interest rate on overnight deposits of non-financial corporations has been unchanged at an all-time low of 0.03% since February. Deposits with agreed maturity of up to one year (which as a rule account for 100% of all deposits with agreed maturity in the case of this sector) were remunerated at a marginally lower rate (0.06%).

Within interest rates on new loans to households, the biggest change was recorded for consumer credit in September. Interest rates on loans to non-financial corporations saw the largest change for loans of over CZK 30 million.

The overall interest rate on consumer credit, loans for house purchase and other loans declined by 0.07 percentage point to 4.07%. Consumer credit was remunerated at 9.29%, down by 0.13 percentage point. This indicator decreased by 1.18 percentage points year on year. The interest rate on loans for house purchase stood at 2.32%, unchanged from August. Mortgage loans were remunerated at a higher rate than in August (2.12%). Building society loans were remunerated at 3.59%, down by 0.01 percentage point. The interest rate on other loans picked up to 3.26%.

The interest rate on new loans to non-financial corporations (excluding overdrafts, revolving loans and credit cards) decreased by 0.07 percentage point to 1.97%. The rate on loans of up to CZK 7.5 million remained at 3.08%. The interest rate on loans of over CZK 7.5 million and up to CZK 30 million picked up by 0.08 percentage point to 2.09%. The interest rate on loans of over CZK 30 million decreased by 0.09 percentage point to 1.92%, returning to its July level.

Interest rates on outstanding amounts

The average interest rates on outstanding amounts of deposits of households changed only slightly in September. Changes recorded for non-financial corporations were similar.

Total deposits of households were remunerated at 0.34%. The interest rate on overnight deposits was flat at 0.10%. The interest rate on deposits redeemable at notice was flat at 1.06% and the rate on deposits with agreed maturity edged down to 1.44%.

Since February 2017, the interest rate on total deposits of non-financial corporations has been flat at the lowest level in the available time series (0.05%). The interest rate on overnight deposits stayed at an all-time low of 0.03%. The interest rate on deposits with agreed maturity was 0.34%, the same as in August.

Interest rates on outstanding amounts of loans to households changed only slightly in September. The changes in interest rates on outstanding amounts of loans to non-financial corporations were also just a few basis points.

The overall interest rate on loans to households fell by 0.03 percentage point to 3.99%. The interest rate on loans for house purchase declined to 2.66%. Consumer credit and other loans were remunerated at 8.14%, down by 0.05 percentage point from August.

The average interest rate on outstanding amounts of loans to non-financial corporations rose to 2.58%. The rate on loans with maturity of up to one year was flat at 2.32%. The interest rate on loans with maturity of over one year and up to five years picked up to 2.78%. The rate on loans with maturity of over five years also rose slightly, reaching 2.64%. This was only its second increase since January this year.

¹⁾ Financial corporations engaged in lending - corporations classified within sector other financial intermediaries which are predominantly engaged in granting credit or loans or entering into agreements of similar nature, for example financial leasing, factoring, consumer credit, hire purchase, etc., (see Decree No. 314/2013 Coll.).

Data are published by the last working day of the second month following the reference period.

COMMENTARY ON THE AGGREGATED BALANCE SHEET OF INVESTMENT FUNDS (TABLE 12): AUGUST 2017

Net assets value: The net assets value of investment funds was CZK 400.8 billion at the end of August. This means an increase of CZK 4.8 billion compared to July (monthly transactions accounted for CZK +6.2 billion). Compared to the same period a year earlier, the net assets value of investment funds rose by 20.3%. The biggest month-on-month change in the net assets value was recorded for equity funds, up by CZK 1.6 billion to CZK 62.6 billion.

Investment in bonds: The value of bond holdings was CZK 105.8 billion at the end of August. Compared to the previous month, the total volume of bonds fell by CZK 2.7 billion (monthly transactions accounted for CZK -2.6 billion). The proportion of debt securities in the funds' net assets value declined to 26.4% compared to the previous month.

Investment in equity securities: The volume of equity securities in the funds' portfolio increased in the month under review. As of the end of the month, the value of holdings of equity securities amounted to CZK 186.7 billion, of which CZK 99.8 billion was investment in the shares and units of investment funds (including money market funds) and CZK 86.9 billion was investment in shares and other equity. The value of equity securities grew by CZK 3.5 billion compared to July (the overall change was equal to monthly transactions). The proportion of equity securities in the funds' net assets value increased to 46.6% compared to the previous month.

Other investment: The value of funds invested in other assets increased in the period under review, by CZK 2.6 billion (monthly transactions accounted for CZK +3.9 billion). The total volume of other investment was CZK 150.0 billion in August, of which CZK 45.7 billion was fixed investment and CZK 66.5 billion investment in deposits. The proportion of other investment in the funds' net assets value edged up to 37.4% compared to the previous month.

Reporting population: At the end of August 2017, a total of 396 resident collective investment funds were active in the Czech Republic, of which 51 were equity funds, 58 bond funds, 77 mixed funds, 84 real estate funds, 124 other funds and two funds without an investment policy. Six new investment funds were established in August and one investment fund ceased to exist.

COMMENTARY ON THE AGGREGATED BALANCE SHEET OF FINANCIAL CORPORATIONS ENGAGED IN LENDING (TABLES 13 AND 14): JUNE 2017

Financial corporations engaged in lending had total assets of CZK 396.7 billion as of 30/06/2017, up by CZK 11.9 billion in quarter-on-quarter terms. Compared to 2016 Q2, total assets increased by CZK 36.5 billion (or 10.1%) year on year.

The largest asset item was loans provided, totalling CZK 295.6 billion, of which CZK 285.2 billion was provided to residents. Compared to the previous quarter, total loans provided rose by CZK 9.1 billion in 2017 Q2. Loans also increased in year-on-year terms, by 10.6% (CZK 28.2 billion).

The largest part of loans provided to residents consisted of loans to non-financial corporations amounting to CZK 223.8 billion, i.e. 78.5% of loans to residents. Loans provided to non-financial corporations were up by CZK 8.4 billion compared to the previous quarter. In year-on-year terms, they rose by CZK 24.8 billion.

The second largest category of loans to residents consisted of loans to households, totalling CZK 60.3 billion. They were up by CZK 0.6 billion compared to the previous quarter. These loans accounted for 21.2% of loans granted to residents.

GLOSSARY

Harmonisation of statistics: the Treaty establishing the European Community tasked the European Central Bank (ECB) with ensuring harmonised statistics according to Article 5 of the Statute of the European System of Central Banks. The national central banks of EC Member States therefore collect statistical information according to a uniform definition, from which the ECB then compiles aggregate data for euro area monetary policy. Although Council Regulation No 2533/98, which specifies the requirements for statistical data collection, only concerns euro area countries, the ECB also receives full data sets from the non-participating countries (e.g. the Czech Republic) in order to monitor their economic and financial development.

Monetary statistics: financial macrostatistics of constituent sub-sectors of the sector S.12 based exclusively on the "host country" principle. According to this principle, a resident reporting unit is an institution resident in a given economic territory. The reporting population includes 1) institutions incorporated and located in the territory, including subsidiaries of parent companies located outside that territory, and 2) branches of institutions that have their head office outside that territory.

APRC: annual percentage rate of charge, i.e. the rate including interest expenses and all related costs of the credit to the client (fees etc.).

Investment funds: for the purposes of monetary and banking statistics, investment funds comprise investment funds other than money market funds which are resident in the Czech Republic. These are undertakings the sole object of which is collective investment, i.e. pooling investor funds and investing them under conditions stipulated in the Act on Management Companies and Investment Funds (No. 240/2013 Coll.). Such undertakings may be constituted under the Act either as unit trust managed by an investment company or as investment funds.

Consolidated balance sheet of the MFI sector: the basic statistical tool of monetary statistics. It is based on the residency principle and is obtained by netting out inter-MFI positions on their aggregated balance sheet.

Consumer credit: loans granted to households for personal use in the consumption of goods and services.

Contribution to annual growth rate: the growth rate of a selected component weighted by its share in the total growth rate.

Deposits redeemable at notice: deposits that can be withdrawn by clients only after the expiry of a period of notice agreed in advance, which starts at the moment of notification of the intention to withdraw the deposit.

Deposits with agreed maturity: deposits than cannot be withdrawn by clients before a predefined maturity.

Financial corporations engaged in lending (FCLs):

Definition: FCLs mean corporations classified within sector S.125 other financial intermediaries which are predominantly engaged in granting credit or loans or entering into agreements of similar nature, for example financial leasing, faktoring, consumer credit, hire purchase, etc. (see Decree No. 314/2013 Coll.)

Type of services:

1. Financial leasing - It is financial service, when lessee acquires the right to use good in exchange for rental payment over predetermined term. All risk and rewards of ownership are transferred from lessor to lessee. After lapse of predetermined term ownership of good is transferred from lessor to lessee.

2. Factoring - It is financial service consisting in purchase of short-term receivables (with maturity 30-90 days) before their maturity date. Receivables are transferred on factoring company – factor- by supplier of goods or services.

3. Other lending - This category encompasses granting credit or loans or agreements of similar nature different from financial leasing and factoring. It deals especially with consumer credit, hire purchase, consumption loans, etc.

Growth rate: the percentage change in the monitored variable over the reference period, calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month.

Household sector: institutional units included in the sectors of households (S.14) and non-profit institutions serving households (S.15) under ESA2010.

Housing loans: Loans granted to households for the purpose of purchasing/investing in housing, including building and home improvements.

Interest rate fixation: a period of interest rate fixation, i.e. a period at the beginning of a contract for which the agreed interest rate cannot be changed. Period up to 1 year includes floating rates.

MFI longer-term financial liabilities: comprise deposits with an agreed maturity of over two years, deposits redeemable at a period of notice of over three months, debt securities issued with an original maturity of more than two years and the capital and reserves of the Czech MFI sector.

Monetary aggregates: comprise the monetary liabilities of monetary financial institutions to non-MFI Czech residents except central government. The narrow monetary aggregate M1 includes currency in circulation (excluding cash at banks' cash desks) and overnight deposits. The intermediate monetary aggregate M2 comprises M1, deposits redeemable at a period of notice of up to and including three months and deposits with a maturity of up to and including two years. The broad monetary aggregate M3 comprises M2, money market fund shares/units, debt securities with a maturity of up to two years and repurchase agreements.

Monetary financial institutions (MFIs): financial institutions forming the money-issuing sector. Under Community law, these include the central bank, resident credit institutions, and all other resident financial institutions whose business is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credit and/or invest in securities. In the Czech Republic, MFIs include the central bank, banks, money market funds and credit unions.

Money-holding sector: all residents institutional units except central government (S.1311) and monetary financial institutions (S.121, S.122 and S.123) under ESA2010.

Money-issuing sector: all institutional units included in the sectors of the central bank (S.121) and other monetary financial institutions (S.122 and S.123) under ESA2010.

Money-neutral sector: an institutional sector comprising the central government sector (S.1311) under ESA2010.

Money market funds: collective investment undertakings complying with all the following criteria shall be treated as MMFs, where they:

- (a) pursue the investment objective of maintaining a fund's principal and providing a return in line with the interest rates of money market instruments;
- (b) invest in money market instruments which comply with the criteria for money market instruments set out in Directive 2009/65/EC of the European Parliament and of the Council of 13 July 2009 on the coordination of laws, regulations and administrative provisions relating to undertakings for collective investment in transferable securities (UCITS) (*), or deposits with credit institutions or,

alternatively, ensure that the liquidity and valuation of the portfolio in which they invest is assessed on an equivalent basis;

- (c) ensure that the money market instruments they invest in are of high quality, as determined by the management company. The quality of a money market instrument shall be considered, inter alia, on the basis of the following factors:
 - the credit quality of the money market instrument,
 - the nature of the asset class represented by the money market instrument,
 - for structured financial instruments, the operational and counterparty risk inherent within the structured financial transaction,
 - the liquidity profile;
- (d) ensure that their portfolio has a weighted average maturity (WAM) of no more than 6 months and a weighted average life (WAL) of no more than 12 months, when
 - 'weighted average maturity' (WAM) shall mean a measure of the average length of time to maturity of all of the underlying securities in the fund weighted to reflect the relative holdings in each instrument, assuming that the maturity of a floating rate instrument is the time remaining until the next interest rate reset to the money market rate, rather than the time remaining before the principal value of the security must be repaid. In practice, WAM is used to measure the sensitivity of a MMF to changing money market interest rates;
 - 'weighted average life' (WAL) shall mean the weighted average of the remaining maturity of each security held in a fund, meaning the time until the principal is repaid in full, disregarding interest and not discounting. Contrary to the calculation of the WAM, the calculation of the WAL for floating rate securities and structured financial instruments does not permit the use of interest rate reset dates and instead only uses a security's stated final maturity. WAL is used to measure the credit risk, as the longer the reimbursement of principal is postponed, the higher the credit risk. WAL is also used to limit the liquidity risk;
- (e) provide daily net asset value (NAV) and a price calculation of their shares/units, and daily subscription and redemption of shares/units;
- (f) limit investment in securities to those with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days whereby floating rate securities should reset to a money market rate or index;
- (g) limit investment in other collective investment undertakings to those complying with the definition of MMFs;
- (h) do not take direct or indirect exposure to equity or commodities, including via derivatives and only use derivatives in line with the money market investment strategy of the fund. Derivatives which give exposure to foreign exchange may only be used for hedging purposes. Investment in non-base currency securities is allowed provided the currency exposure is fully hedged;
- (i) have either a constant or fluctuating NAV

Net external assets: comprise external assets of Czech MFIs (such as monetary gold, non-koruna banknotes, securities issued by non-residents and loans granted to non-residents) minus external liabilities of the Czech MFI sector (such as non-residents' holdings of deposits, repurchase agreements, money market fund shares and units, and debt securities with a maturity of up to and including two years issued by MFIs and held by non-residents).

Non-MFIs: all resident sectors excluding MFIs, i.e. general government (S.13), non-financial corporations (S.11), financial institutions other than MFIs (S.124, S.125, S.126, S.127, S.128, and S.129) and households and non-profit institutions serving households (S.14 and S.15) under ESA2010.

Other financial intermediaries (OFIs): entities included in the sectors of other financial intermediaries except insurance corporations and pension funds (S. 125), financial auxiliaries (S.126), captive financial institutions and money lenders (S.127), insurance corporations (S.128), and pensions funds (S.129) under ESA2010.

Private sector: a sector comprising all institutional sectors except general government (S.13) and monetary financial institutions (S.121, S.122 and S.123) under ESA2010.

Rates on new business: interest rates agreed by the bank and the client for all agreements negotiated during the reference period.

Rates on outstanding amounts: interest rates applied to end-of-period balances.

Reclassifications: comprise any changes in the MFI balance sheet resulting from changes in the reporting population, corporate restructuring, reclassifications of assets and liabilities, and corrections of reported errors.

Residents: all domestic and foreign legal entities and natural persons, including branches of foreign banks and foreign owners of buildings and land, whose centre of economic interest is in the given territory. Foreign legal entities and natural persons are considered residents after at least one year of economic activity in the territory, with the exception of foreign bank branches and owners of buildings and land, who become residents at the moment they perform a valid legal act (in the case of foreign owners of buildings and land, this only applies in connection with transactions relating to the building or land in question).

Transaction (flow) data: values related to the whole period which are calculated as the difference between the balances at the end of the current and the previous period adjusted for non-transaction effects, i.e. effects connected with reclassifications, valuation changes and exchange rate variations over the period. These factors result in breaks in time series, thereby affecting the comparability of end-of-period balances. Transaction (flow) data only reflect those changes that arise from transactions, i.e. from accepting financial assets or providing financial liabilities.

Unit trusts other than money market funds:

1. Equity funds – funds investing mainly in shares and other equity.
2. Bond funds – funds investing mainly in securities other than shares.
3. Mixed funds – funds investing in equity and debt securities without a clear preference for either approach.
4. Real estate funds – funds investing mainly in real estate.
5. Hedge funds – funds applying more or less unlimited investment strategies in order to achieve positive absolute yields, whose managers are remunerated based on the fund's performance in addition to their salary.
6. Other funds – investment funds other than equity funds, bond funds, mixed funds, real estate funds or hedge funds.

Funds of funds and funds of qualified investors are classified under the aforementioned categories according to their investment strategies.

TECHNICAL NOTES

A. Calculation of growth rates

The growth rate for the reference period is calculated from the volumes of monthly financial transactions and the outstanding amounts at the beginning of each month. Monthly transactions are calculated from differences in outstanding amounts adjusted for reclassifications, other revaluations, exchange rate variations and other changes which do not arise from transactions. This data thus reflects only those changes that arise from accepting financial assets or providing financial liabilities. Reclassifications and other non-transaction corrections are introduced into the transaction statistics to preserve the comparability of the gradual monitoring results, thereby enabling calculation of the indices of expected outstanding balances of the monitored variables and determination of their growth rates.

Method of calculation

1. The month-on-month percentage change a_t^M for month t is calculated as:

$$(a) \quad a_t^M = \left(\frac{F_t^M}{L_{t-1}} \right) \times 100$$

2. The annual growth rate for month t , i.e. the change for the last 12 months ending with month t , is calculated as the product of the twelve coefficients for each previous month. The calculation of the annual growth rate from the month-on-month growth rates thus enables transaction changes and non-transaction effects in the individual months to be taken into account.

$$(b) \quad a_t = \left[\prod_{i=0}^{11} \left(1 + \frac{F_{t-i}^M}{L_{t-1-i}} \right) - 1 \right] \times 100 ,$$

where

F_t^M - transactions in month t

$F_t^M = (L_t - L_{t-1}) - C_t^M - E_t^M - V_t^M$

and

L_t - outstanding amount at the end of month t

C_t^M - reclassifications in month t

E_t^M - exchange rate variations in month t

V_t^M - valuation changes in month t

Growth rates for other reference periods are derived from formula (b).

B. Calculation of the contribution to the annual growth rate of a monitored variable (e.g. M3)

If $a_t(M3)$ represents the annual growth rate of M3 for the year ending with month t , and $F_{t-i}(M1)$, $F_{t-i}(M2-M1)$, $F_{t-i}(M3-M2)$ are the monthly transactions of the components M1, M2-M1 and M3-M2 in month $t-i$, the contribution of M1 to the annual growth rate of M3, for example, is calculated as:

$$\frac{\sum_{i=0}^{11} F_{t-i}(M1)}{\sum_{i=0}^{11} [F_{t-i}(M1) + F_{t-i}(M2-M1) + F_{t-i}(M3-M2)]} \times a_t(M3)$$

LIST OF ANNEXES

November 2017: Cost-of-borrowing Indicators

ANNEX

COST-OF-BORROWING INDICATORS

The Czech National Bank has been publishing fully harmonised MIR statistics in accordance with Regulation ECB/2013/14 since January 2004. These statistics are used in the CNB's economic and monetary analyses and are reported to the ECB on a monthly basis. Over time, it has been found that in order to estimate the effectiveness of monetary policy pass-through across euro area and EU countries, it is necessary to use an accurate and comparable measure of the borrowing costs for non-financial corporations and households in those countries, in addition to the standard MIR indicators. For this reason, the euro area countries started to publish cost-of-borrowing indicators (CBI) in 2013. The CBIs were created to assess the effectiveness of monetary policy pass-through and economic forecasts and to compare economic conditions across the euro area countries. The Czech Republic voluntarily signed up to the publication of CBIs in June 2014.

The motive for implementing the CBIs was that aggregate indicators cannot be easily compiled for MIR statistics in some cases due to inhomogeneity in the definitions of the underlying instruments. For example, overdrafts¹ are recorded in the monthly statistics on new loan contracts ("new business"), but they have a higher periodicity and different characteristics. They cannot be left out if this segment is to be fully covered. Because of the difference in definitions, however, interest rates could previously be monitored only separately for individual instruments, not in aggregate form. The CBI calculation algorithm eliminates this shortcoming for certain instruments.

Four basic categories of underlying instruments were used to calculate the CBIs: interest rates on loans provided by banks to non-financial corporations and interest rates on loans provided by banks to households for house purchase. The MIR source statistics were used in two ways to construct the CBIs. Interest rates on long-term loans provided by banks to non-financial corporations and interest rates on short-term and long-term loans provided by banks to households for house purchase were obtained directly from the MIR statistics. In the case of interest rates on long-term loans provided by banks to non-financial corporations, two additional calculations had to be performed to make this aggregate indicator applicable. This involved accounting for the importance of overdrafts an important source of financing for firms and computing an estimate of the share of long-term loans with original and residual maturity of over one year and interest rate reset in the next twelve months, as these long-term loans are akin to short-term loans.

There are eight indicators: four basic ones and four derived ones. The basic indicators provide an assessment of the costs of borrowing broken down into short-term and long-term loans to households and non-profit organisations serving household for house purchase and to non-financial corporations. These four basic CBIs are used to compile the derived CBIs – short-term CBIs, long-term CBIs, CBIs for non-financial corporations as a whole and CBIs for households and non-profit institutions serving households as a whole. The CBIs cover CZK-denominated loans.

The CBIs are compiled on the basis of the existing MFI interest rate (MIR) and balance sheet statistics. The CBIs for households and non-profit institutions serving households (HH) are calculated using loans for house purchase (new business). Consumer credit and other loans are not included as their interest rates are too volatile across countries and thus not relevant for macroeconomic projections.

¹ Overdrafts are debit balances on current accounts, revolving loans and card credit.

OVERVIEW OF DERIVED COST-OF-BORROWING INDICATORS IN THE CZECH REPUBLIC AND AUSTRIA

	2016		2017					
	August		June		July		August	
	Rate (%)		Rate (%)		Rate (%)		Rate (%)	
	CZ	AT ⁵⁾	CZ	AT	CZ	AT	CZ	AT
(1) Households – total^{1),2)}	2.26	1.87	2.32	1.86	2.34	1.84	2.33	1.83
(2) Non-financial corporations – total	1.82	1.70	2.07	1.55	2.04	1.62	2.08	1.57
(3) Short-term cost of borrowing – total³⁾	1.80	1.69	2.09	1.55	2.02	1.61	2.05	1.55
(4) Long-term cost of borrowing – total⁴⁾	2.23	2.08	2.27	1.91	2.32	1.96	2.34	1.95

¹⁾ MFI interest rate statistics cover CZK-denominated loans only. The rates on outstanding amounts are the rates applied to end of period balances.

²⁾ Households comprise the household sector (S.14) and non-profit institutions serving households (S.15) under ESA2010.

³⁾ Short-term (ST) loans are loans with a floating rate or an initial rate fixation up to one year.

⁴⁾ Long-term (LT) loans are loans with an initial rate fixation over one year.

⁵⁾ AT = Austria.

Cost-of-borrowing indicators of households and non-financial corporations

Long-term and short-term cost-of-borrowing indicators

Recent developments in derived cost-of-borrowing indicators in the Czech Republic and Austria

All four derived cost-of-borrowing indicators (CBIs) were higher for Czech loans than for Austrian loans in August 2017, by one-half of a percentage point on average. One Czech and four Austrian CBIs fell month on month in August. In year-on-year terms, the Czech derived CBIs increased, whereas the Austrian ones declined. The Austrian short-term CBI was the lowest in August. By contrast, the long-term CBI in the Czech Republic was the highest.

Compared to July, the cost of borrowing of Czech households decreased marginally. The same was true for Austria. In August, this CBI reached 2.33% in the Czech Republic and 1.83% in Austria. The differential between this Czech and Austrian CBI was 0.50 percentage point, the second largest differential among all the monitored CBIs in the Czech Republic and Austria. In year-on-year terms, an increase of 0.07 percentage point and a decrease of 0.04 percentage point respectively were recorded in the Czech Republic and Austria. This Austrian CBI was the second highest among all the derived CBIs in Austria.

The borrowing costs of non-financial corporations in the Czech Republic saw a month-on-month increase of 0.04 percentage point to 2.08%. This CBI was 1.57% in Austria, i.e. 0.51 percentage point lower than in the Czech Republic. This was the largest differential among the eight CBIs under comparison. Loans to non-financial corporations in Austria are thus less costly than in the Czech Republic. The Austrian CBI recorded a month-on-month decline of 0.05 percentage point. The year-on-year change in this indicator was 0.26 percentage point in the Czech Republic and -0.13 percentage point in Austria.

The total short-term cost of borrowing, which comprises both households and non-financial corporations, increased to 2.05% in the Czech Republic. In Austria, this indicator was 0.50 percentage point lower. It stood at 1.55%, the lowest level among all the eight CBIs under comparison. The month-on-month change in this CBI in Austria was larger than in the Czech Republic. In year-on-year terms, an increase of 0.25 percentage point and a decrease of 0.14 percentage point respectively were recorded in the Czech Republic and Austria.

In the Czech Republic, the long-term cost of borrowing (comprising both households and non-financial corporations) edged up to 2.34% in August. In Austria, this CBI dropped by 0.01 percentage point to 1.95%. In year-on-year terms, this CBI rose by 0.11 percentage point in the Czech Republic but declined by 0.13 percentage point in Austria. In August, this CBI was 0.39 percentage point lower in Austria than in the Czech Republic, the smallest differential among the derived CBIs in the Czech Republic and Austria.
